Differentiated Service Delivery: Building Blocks

WHO recommendations supporting DSD for stable clients

WHEN

- 3-6 monthly ART refills
- 3-6 monthly clinic visits

WHO

- Trained non-physicians/nurses/midwives can initiate and maintain ART
- Trained/supervised lay providers can distribute ART
- Trained/supervised CHWs can dispense ART between clinic visits

WHERE

- ART maintenance at community level

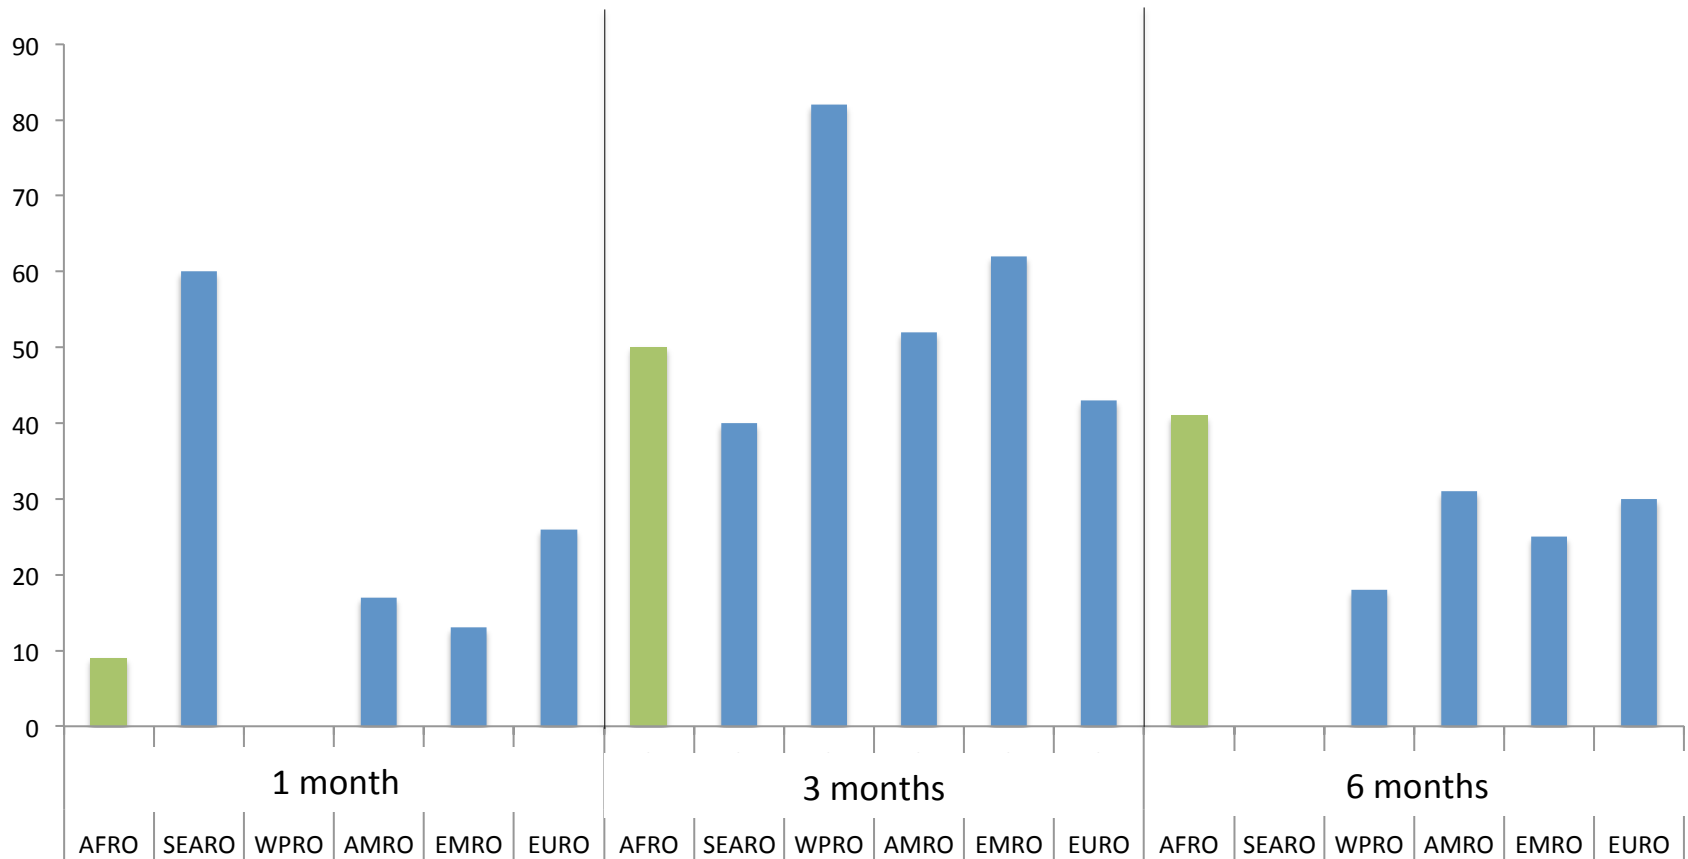

Policy uptake what do we know?

Data reported to WHO, validated by MoH

Data up to end 2016 (2017 in validation)

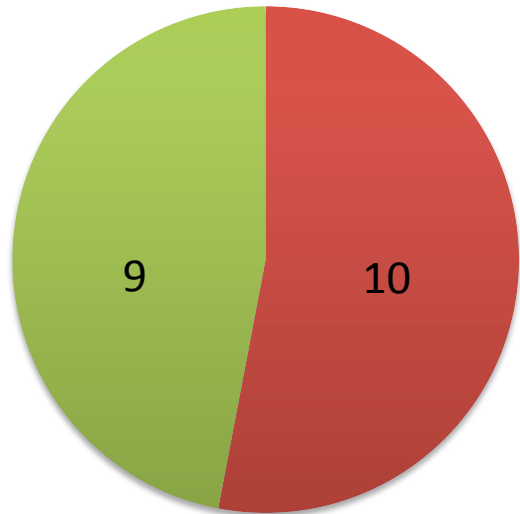

- Frequency of clinic visits
- Frequency of ART dispensing
- Nurse-led ART
- Community ART

WHEN: Frequency of clinic visits

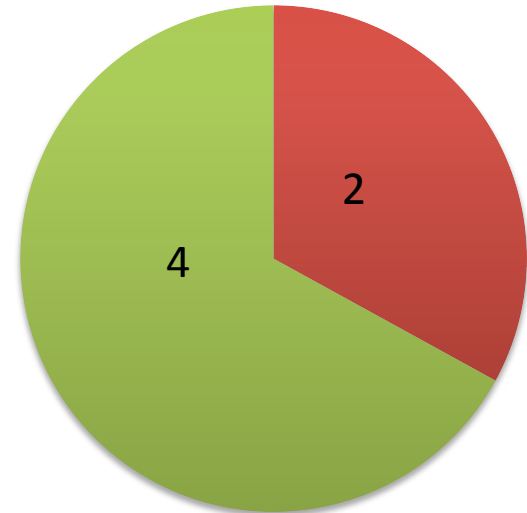

Frequency of clinic visits: Africa

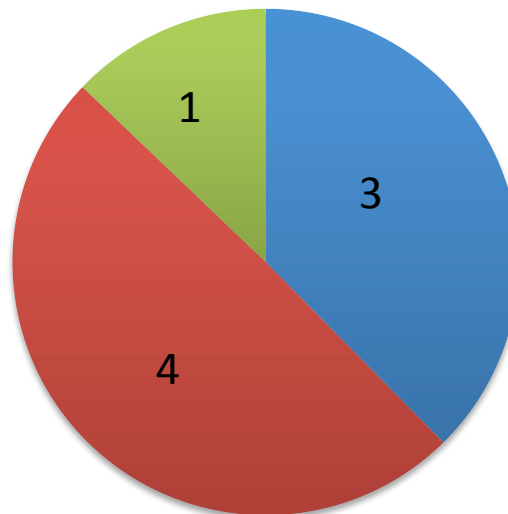

Eastern & Southern

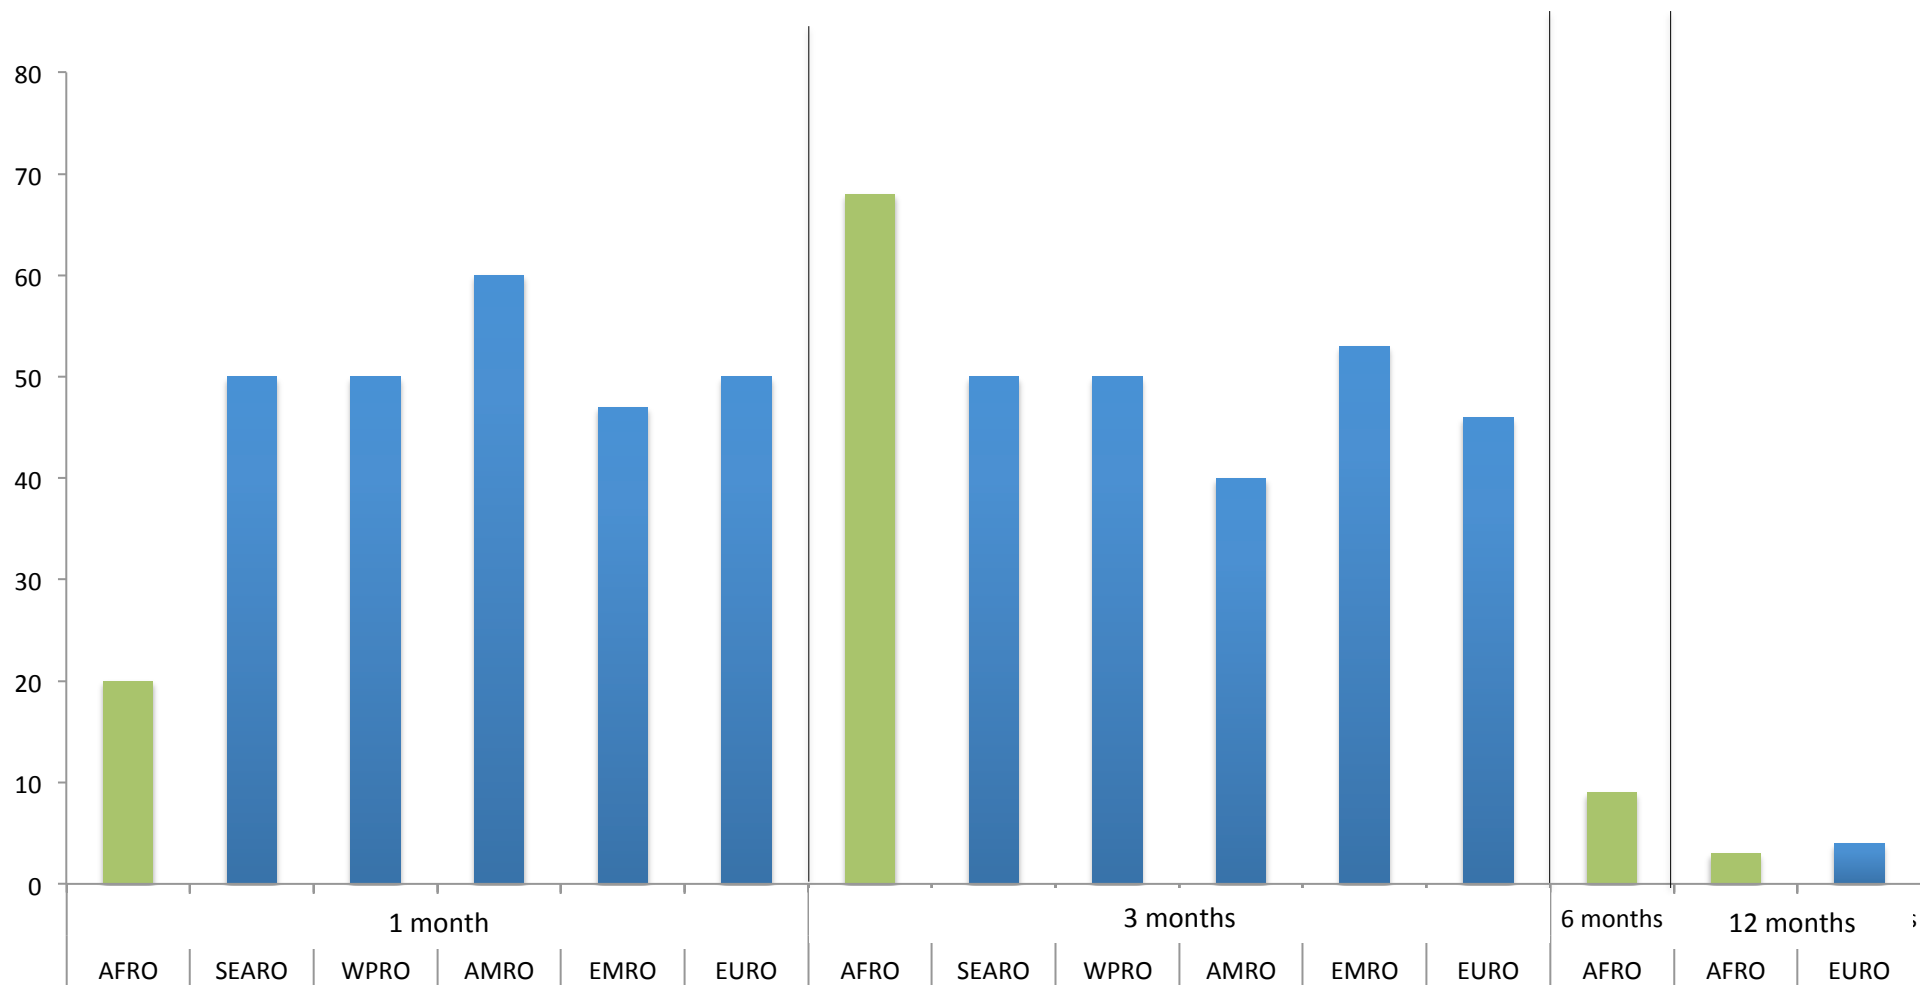

Central

West

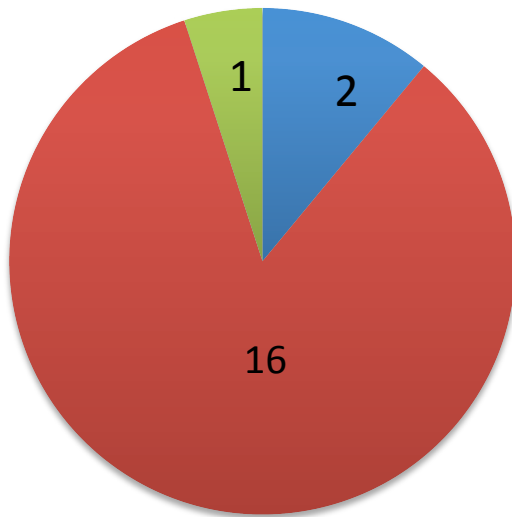

WHEN: Frequency of dispensing

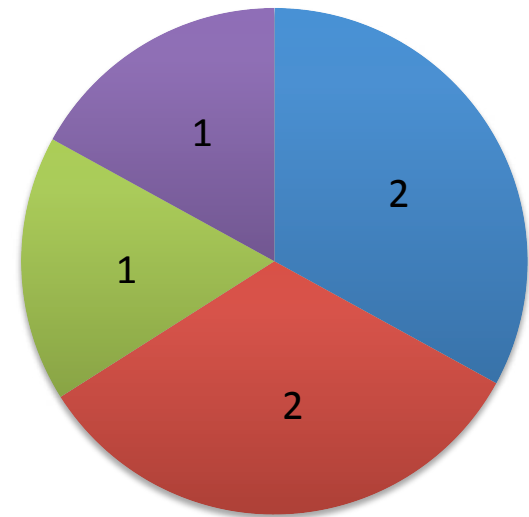

Frequency of dispensing: Africa

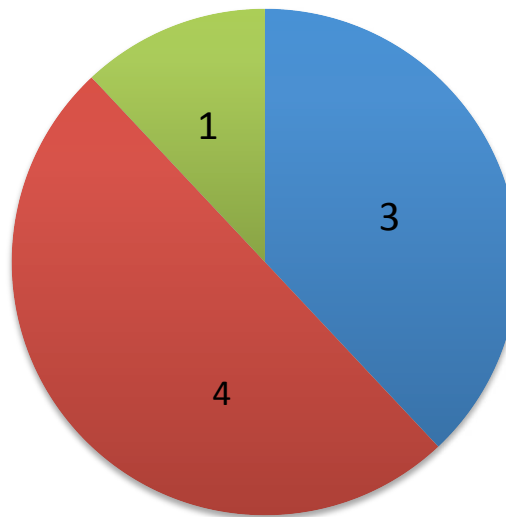

Eastern & Southern

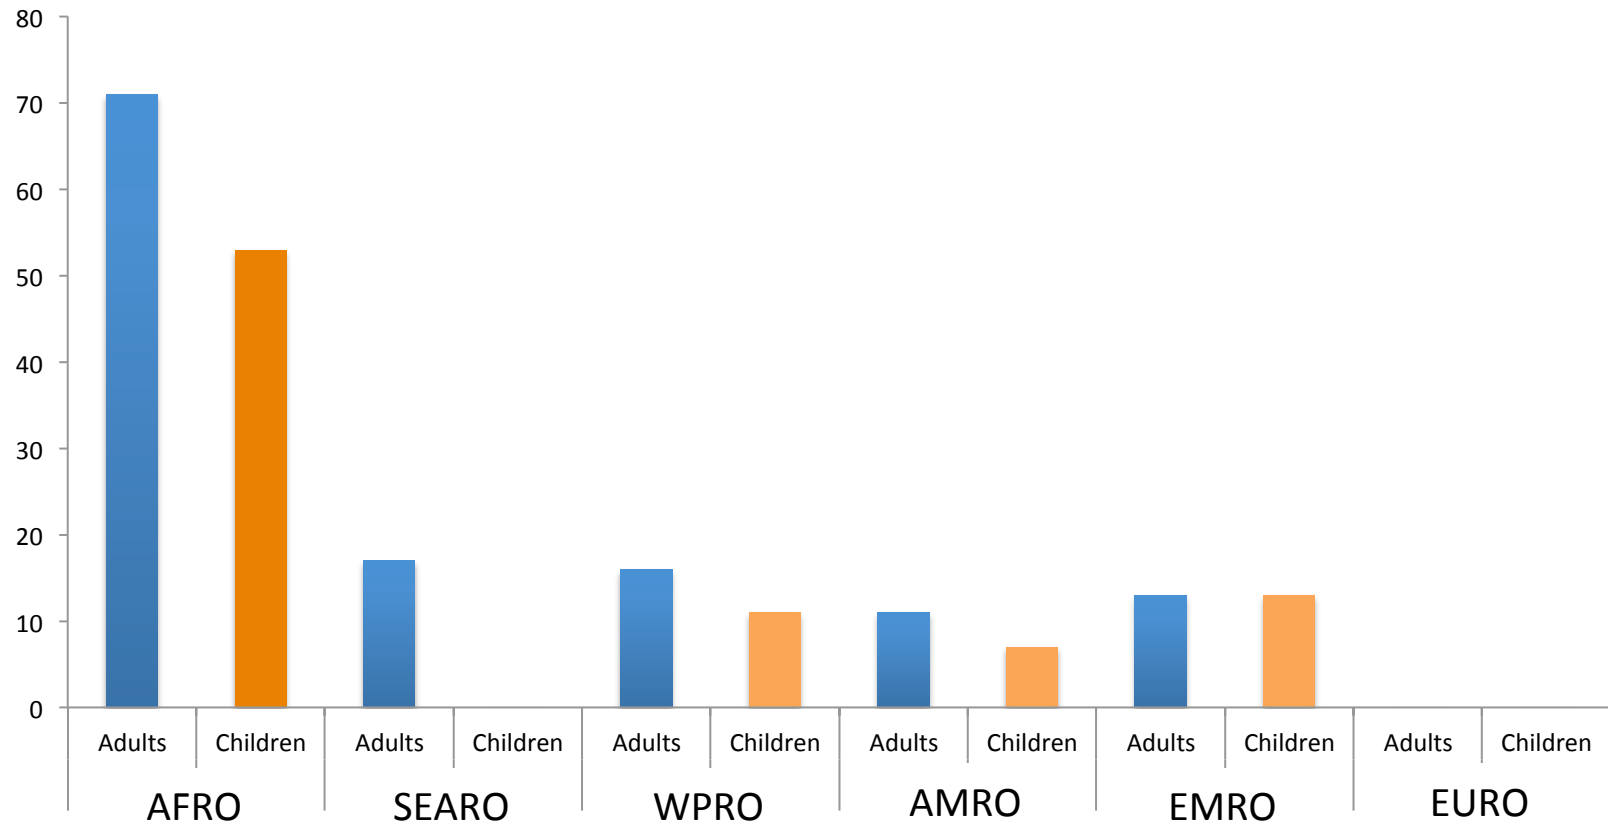

Central

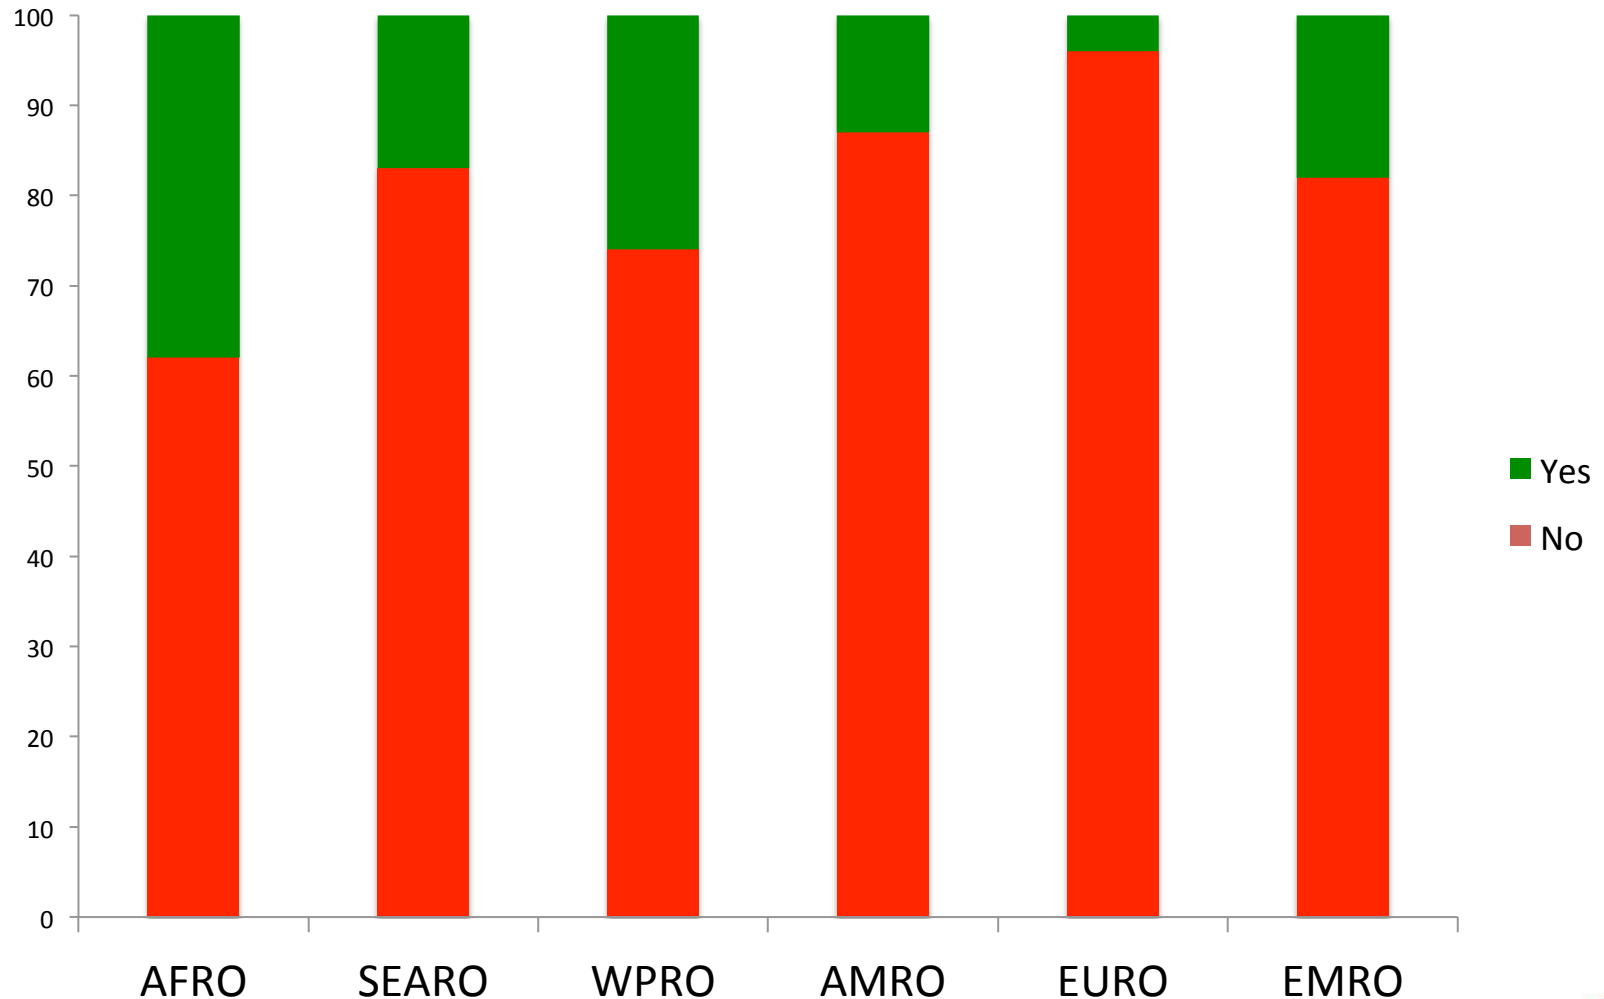

West

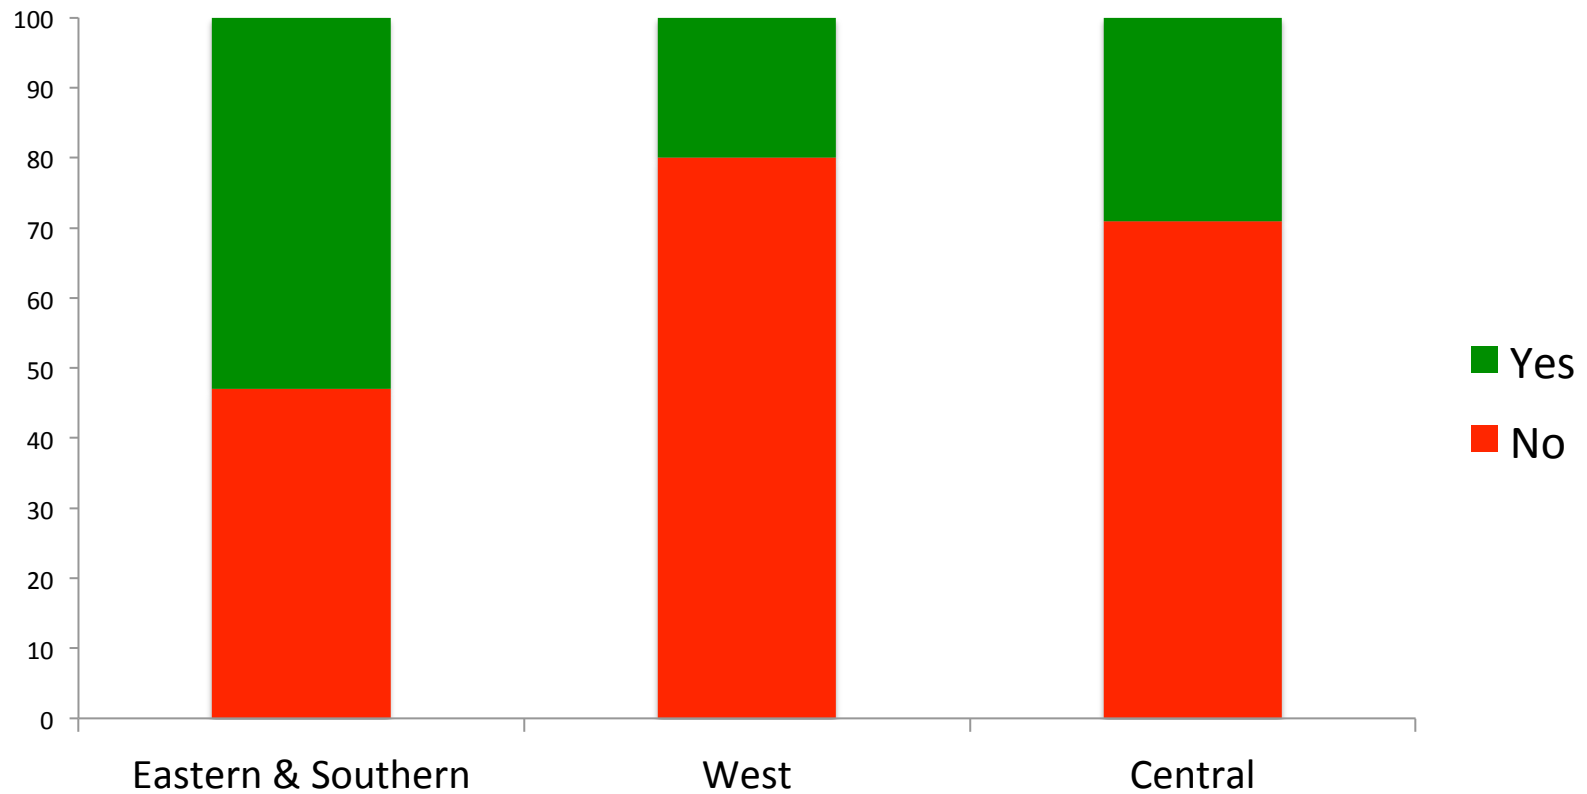

WHO: Nurse led ART

WHERE: Community ART

WHERE: Community ART

Summary

- Policies supporting DSD general widely implemented - Africa is leading the way
 - Implementation varies: West Africa behind
- DSD policies vary: 1/3/6/12 months
 - 3 months most common in Africa
 - Implementation of clinic visit spacing more common than ART dispensing
- Community ART: further progress can be made
- Task shifting for children remains limited

What's coming...

- Updated evaluation of country policies for DSD related to outcomes
- Ongoing work on advanced HIV disease
- Updated guidance for 1st and 2nd line ART
- New WHO guidance for CHWs
