What is PAMA care ?

- ❖ Family centered differentiated model of care for children and their caregivers
- ❖ Pairing child care with the father ‘PAPA’ or mother ‘MAMA’
- ❖ Child –Caregiver pairs
 - ✓ Paired clinic appointments
 - ✓ Spaced out clinic appointments for those that are stable
 - ✓ Fast track drug refills
 - ✓ Intensified support ‘ joint’ care for viraemic pairs

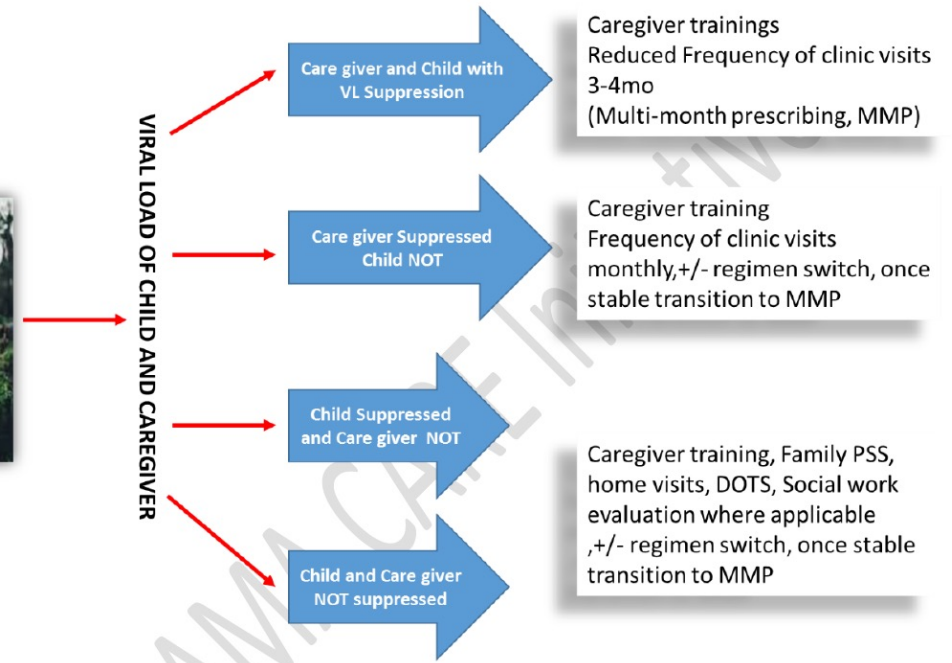

Family centered Differentiated care : Papa and Mama Care [PAMA]

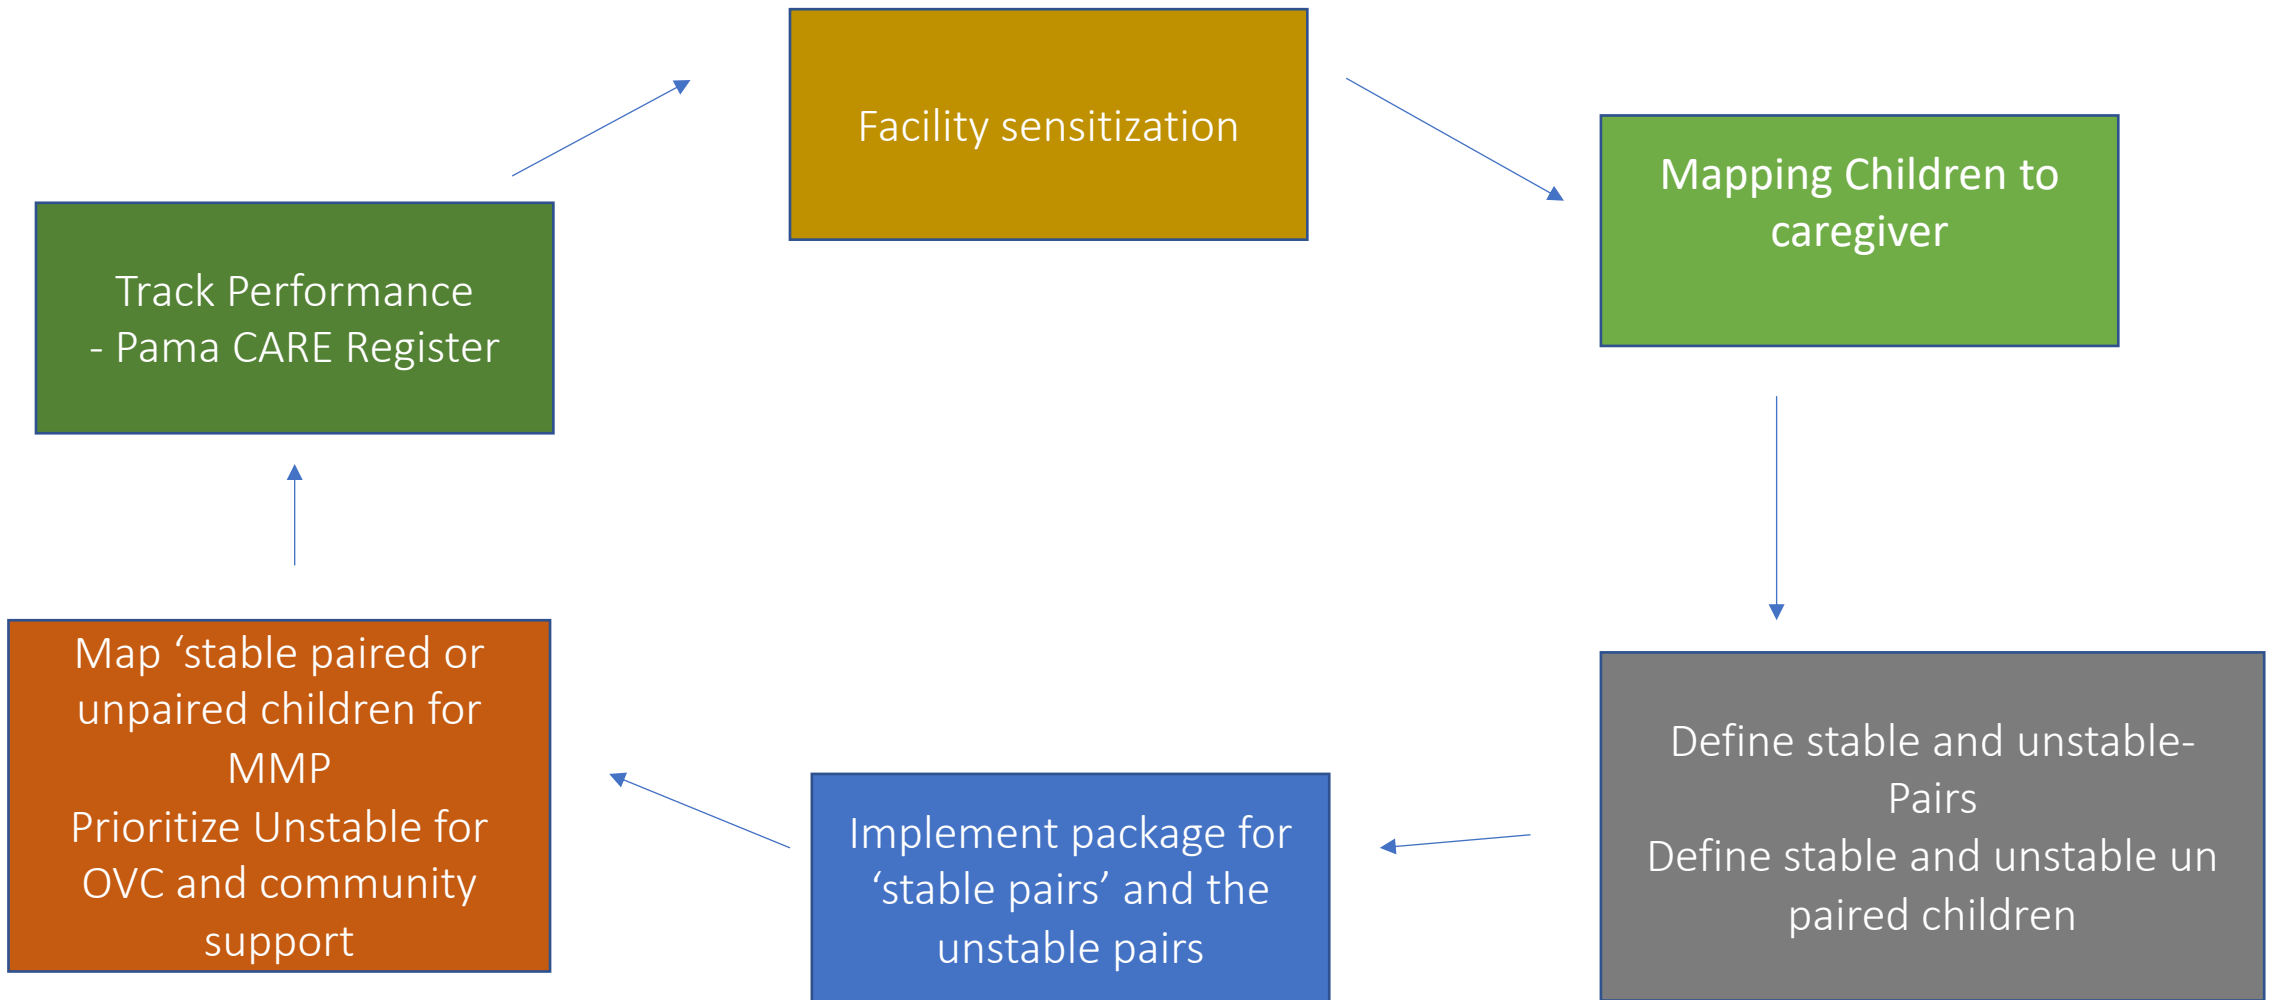

Caregiver-child pairs

Caregiver and Child on ART

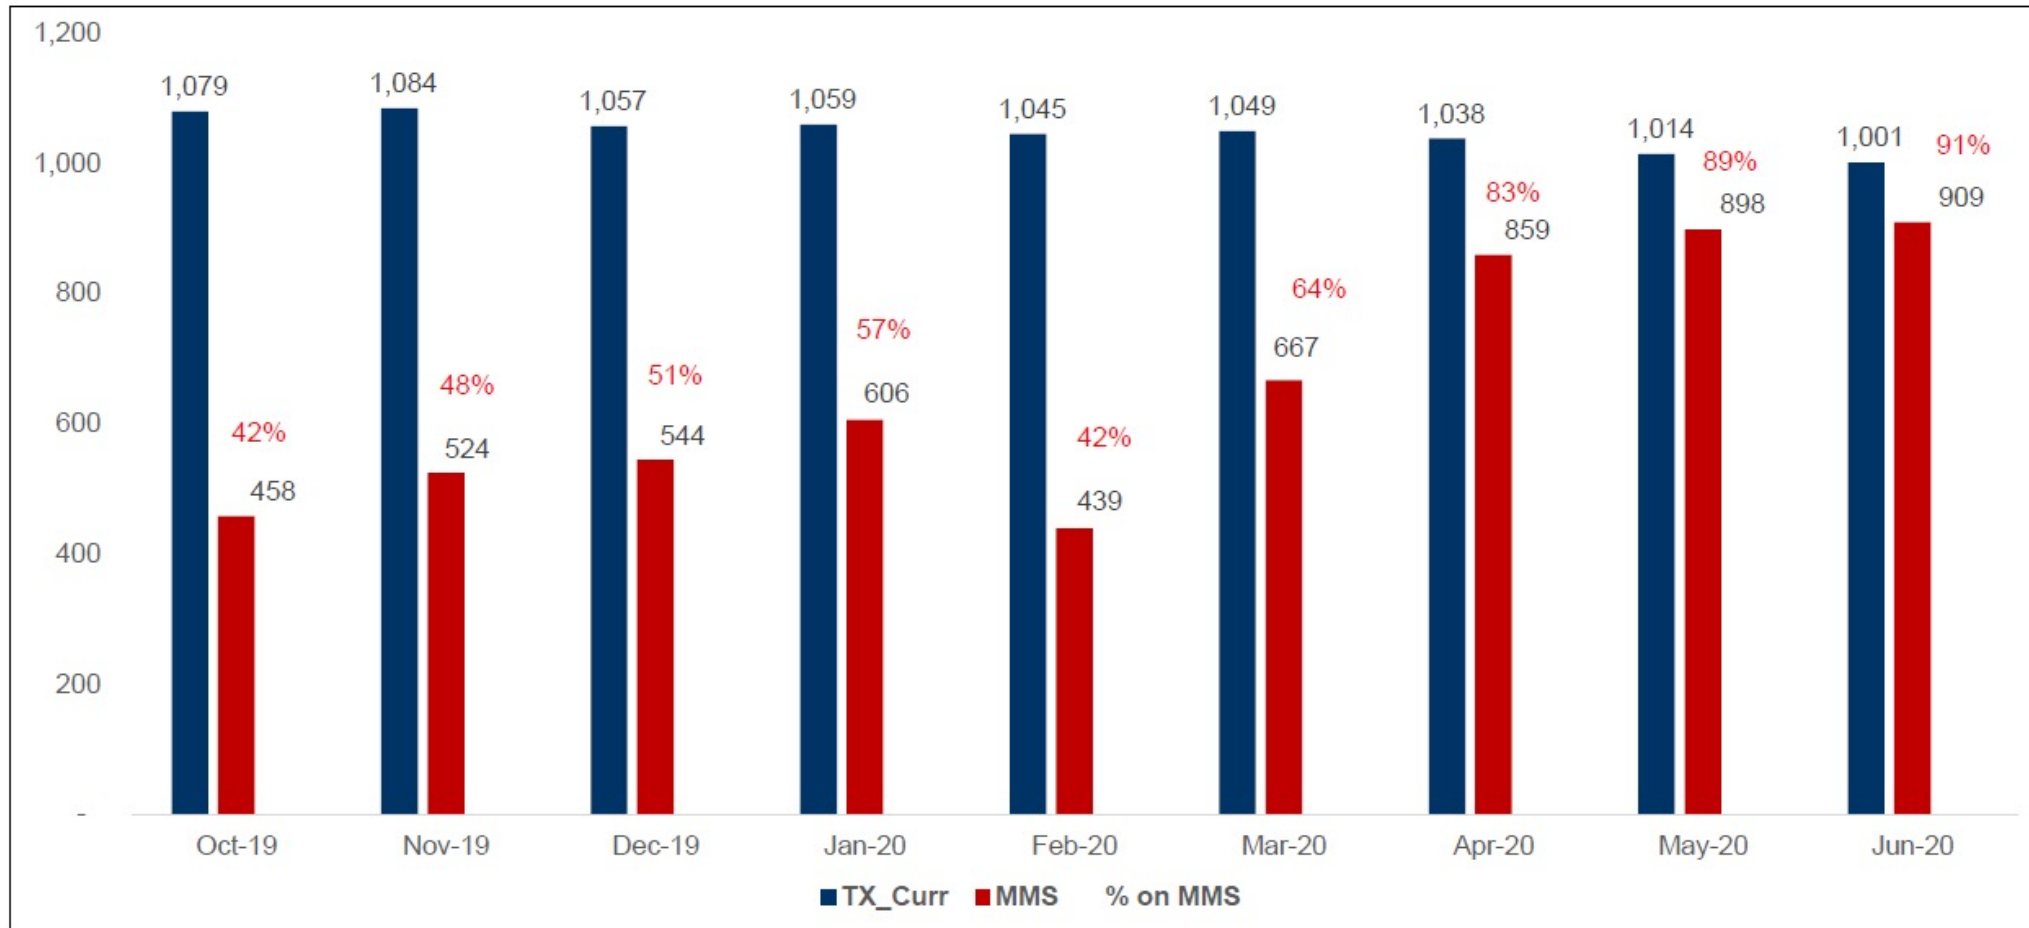

PAMA CARE Implementation Process

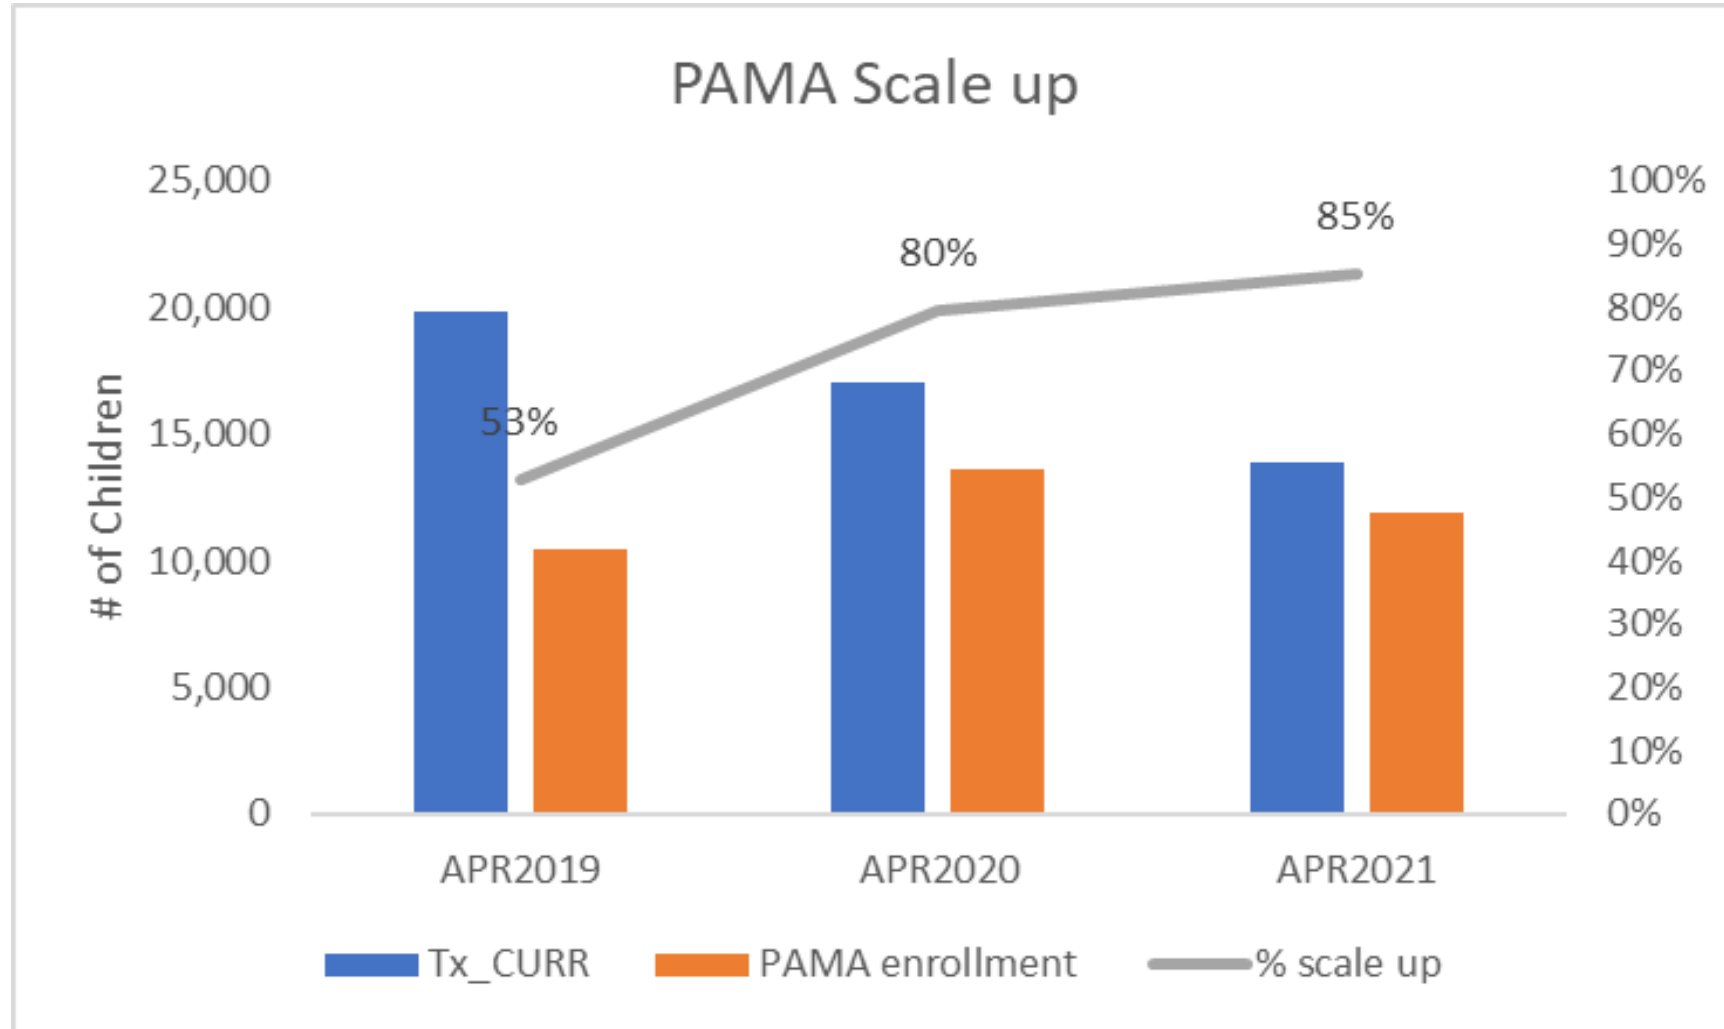

Key considerations for PAMA care differentiated model and Multi-month dispensing of care

	Child 0-14 years	Adolescents	Comments
Individual factors	Age above 1 year	Operation Triple Zero (OTZ) champions and post disclosure support	
Family status	An parent/guardian receiving multi-month dispensing	A parent/guardian receiving multi-month dispensing	Some children will not have biological parents
Nutritional status	Normal W/A Z score for age	Normal BMI or BMI Z score	
ART regimen	Current Regimen for the last 12 mo	Current Regimen for the last 12mo	Preferably on a Single doing regimen or FDC
Viral load	latest VL < 1000 copies /ml	Latest 2 VL < 1000 copies /ml	For newly enrolled at least the 6mo and annual viral load

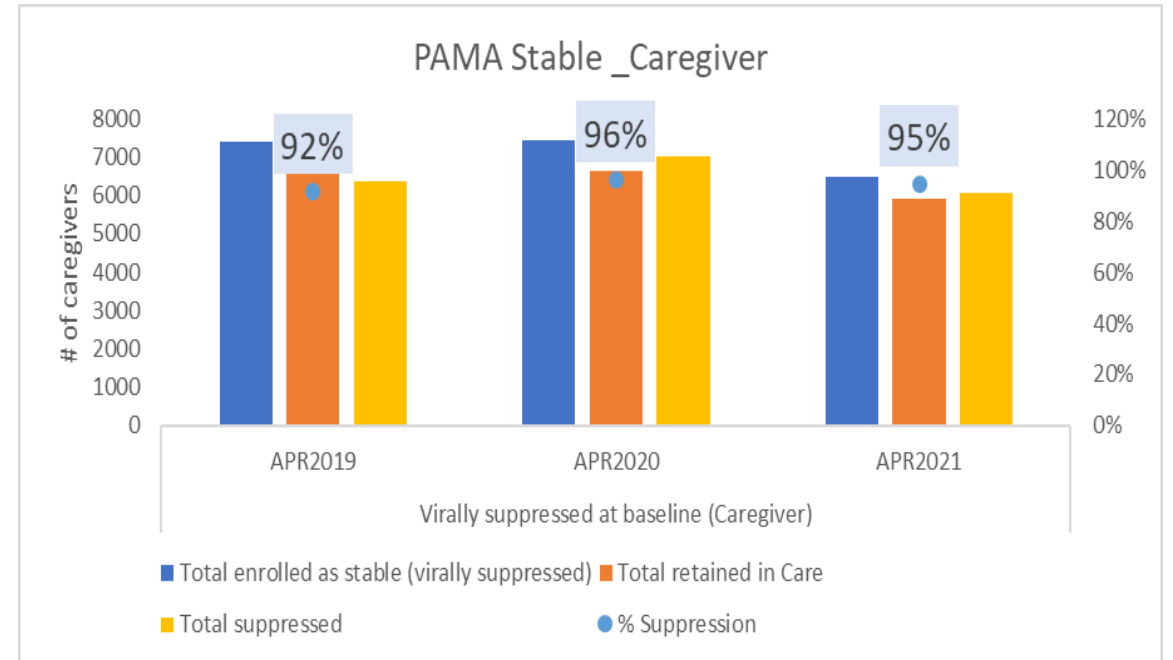

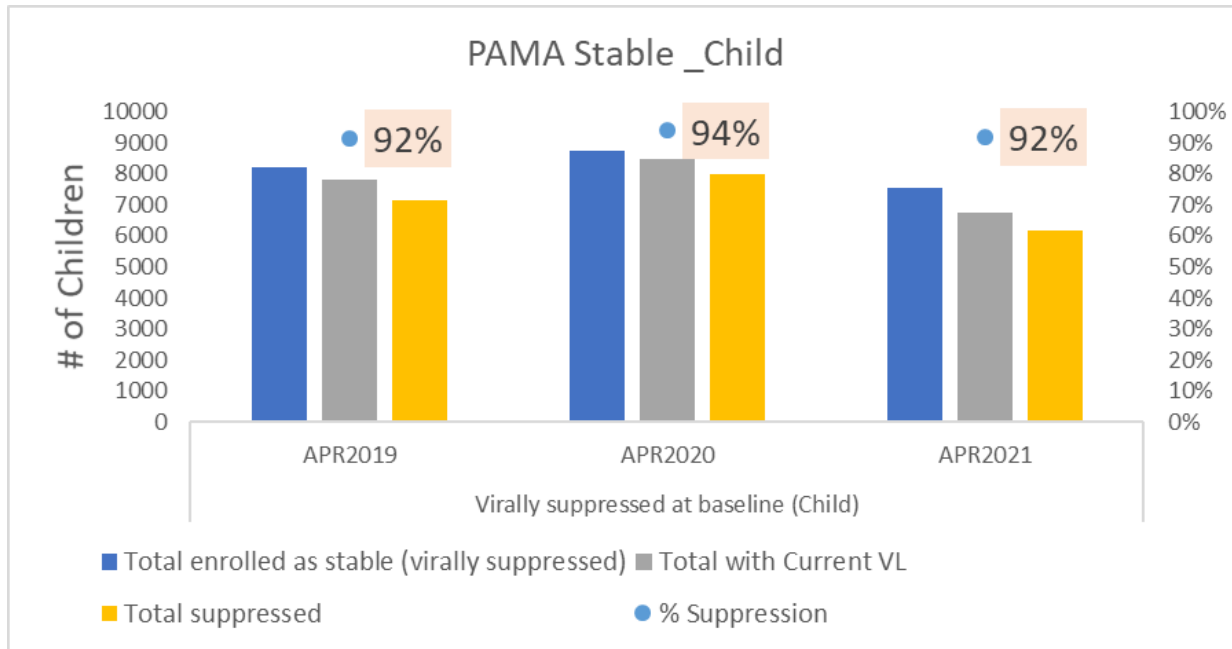

PAMA care differentiated model of care MMD 3 Scale up

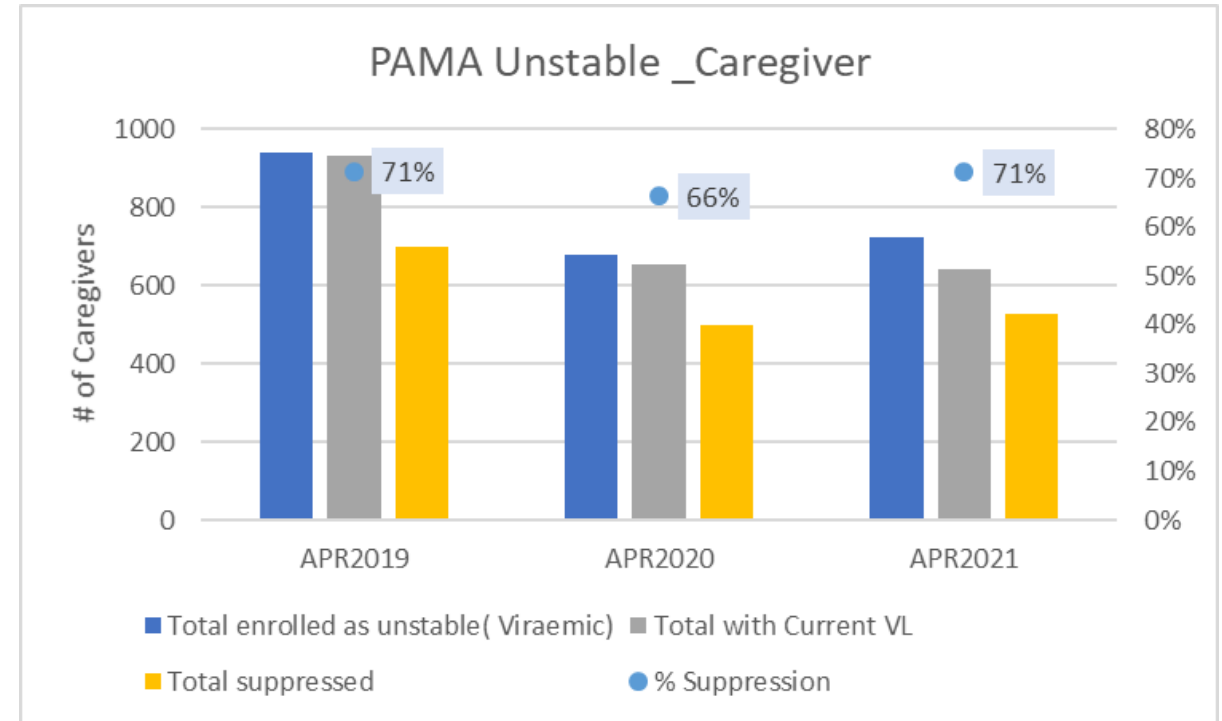

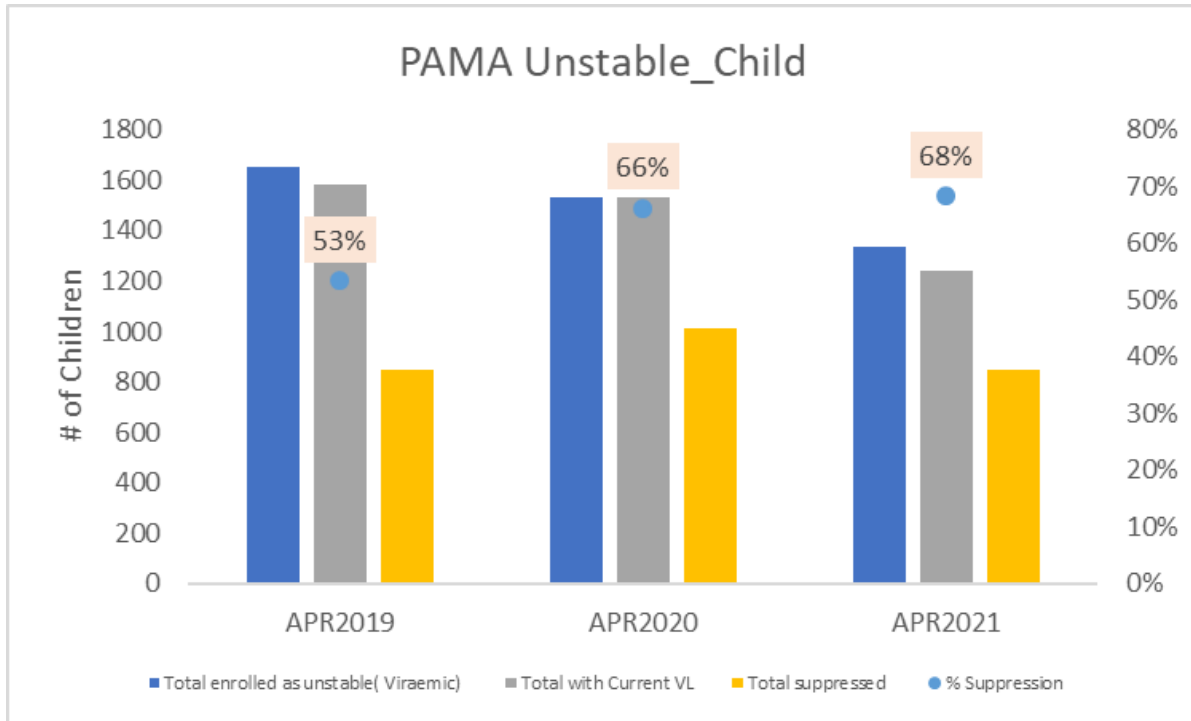

Outcome: Scale up

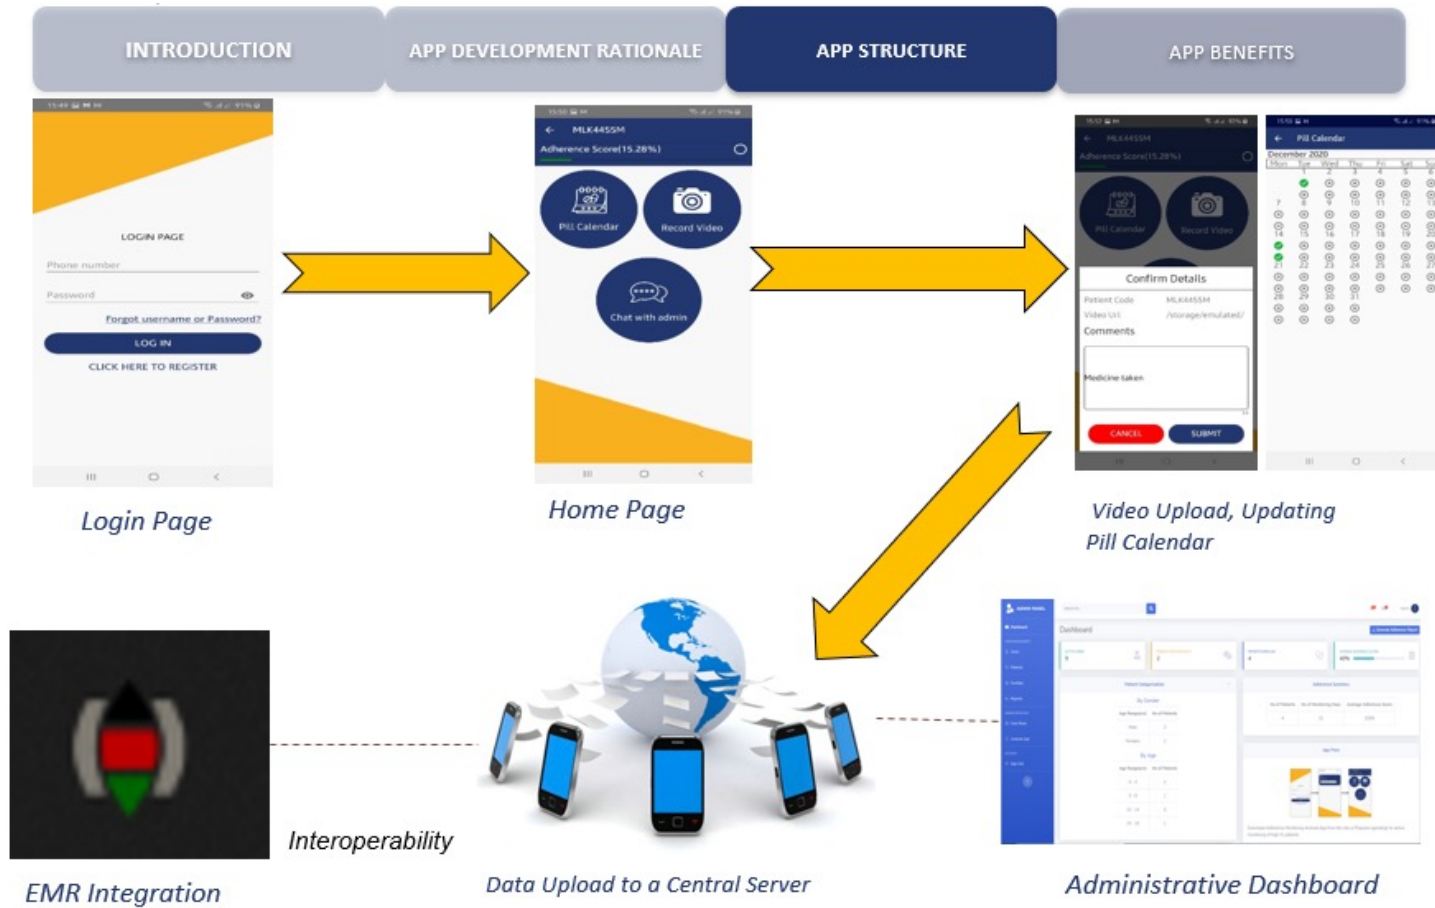

Outcome : Stable Child- caregivers Pairs

Outcome : Unstable Child- caregivers Pairs

Differentiated care for PAMA care Unstable : Video Directly observed therapy

Preferred Partner for Health Solutions

Conclusion

- Child –caregiver pair follow up provides an opportunity for family centred care
- PAMA provides an avenue to provide intensified support for stable and unstable child-caregiver pairs
