

CQUIN 5th Annual Meeting

Virtual: November 16-19, 2021

Session 5a: Country Updates from Burundi and Zimbabwe

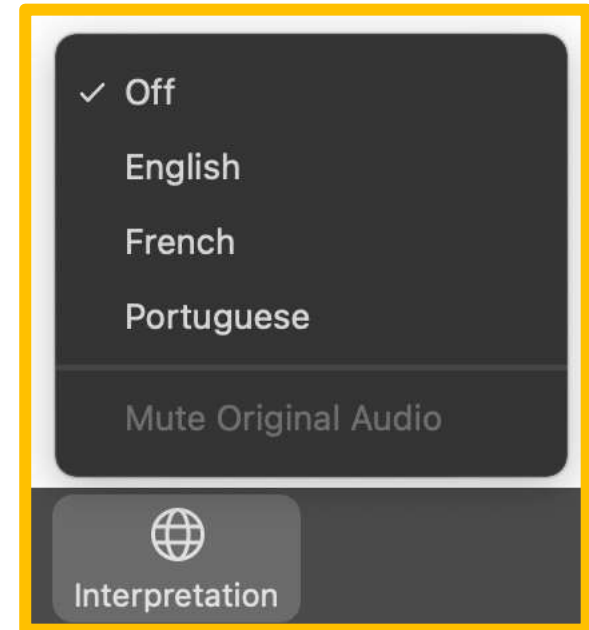

Wednesday, November 17, 2021

HIV Learning Network
The CQUIN Project for Differentiated Service Delivery

Welcome/Bienvenue/Bem-vindos

- Be sure you have selected the language of your choice using the “Interpretation” menu on the bottom of your screen.
- Assurez-vous d’avoir sélectionné la langue de votre choix à l’aide du menu <<Interprétation>> en bas de votre écran Zoom.
- Certifique-se de ter selecionado o idioma à sua escolha usando o menu de interpretação na parte inferior do seu ecrã

Moderators

Isaac Zulu
Medical Epidemiologist
HIV Care & Treatment Branch
Division of Global HIV/AIDS & TB
CDC Atlanta

Bonaparte Nijiranzana
Country Director
ICAP in Burundi

Framing Remarks

Rudo Kuwengwa
CQUIN Regional Clinical Advisor
ICAP in Zimbabwe

Country Updates from Burundi and Zimbabwe: Framing Remarks

Rudo Kuwengwa MB. ChB; MPH
CQUIN Regional Clinical Advisor
ICAP Zimbabwe
17 November 2021

HIV LEARNING NETWORK
The CQUIN Project for Differentiated Service Delivery

Outline

- Introduction
- Burundi
- Zimbabwe
- Summary

Introduction

- The 5th annual meeting will highlight progress updates from 20 network countries who are at different stages of DSD scale-up.
- Duration of network countries in CQUIN ranges from 1yr to 5 years.
- The different context, strengths, challenges, and resources of network countries provide the perfect environment for learning exchange.
- The CQUIN Annual Meeting is an opportunity to share lessons learned and describe change over time.
- Each year, country teams complete a standardized online questionnaire which informs our description of their “model mix” and contributes to the CQUIN dashboard.

DART Model Mix

- CQUIN uses a systematic approach to describe differentiated ART (DART) models.
- This enables us to compare DSD across programs and countries.
- We consider everyone on ART to be in a differentiated model, including those in “conventional” and more-intensive models.
- We categorize less-intensive models for people doing well on ART by location (facility vs. community) and by individual vs. group design.

	Individual Models	Group Models
Facility-based	Fast Track ART Refills Appointment Spacing Multi-month Scripting Multi-month Dispensing	Facility-based clubs Facility-based teen clubs
Community-based	Community drug distribution Community ART initiation Mobile outreach Private pharmacies Pick-up points, lockers	Community ART Groups (CAGs) <ul style="list-style-type: none"> - Peer-led - HCW-led

DART Model Mix, continued

More-Intensive Models	
	Conventional Model
	Other more-intensive models
Less-Intensive Models	
FBI	Appointment Spacing (no fast track)
	Appointment Spacing + Fast Track
	Other FBI
FBG	ART Clubs
	Facility-Based Teen Clubs
	Other FBG
CBI	Outreach
	Community Drug Distribution
	Other CBI
CBG	Community ART Groups (peer-led)
	Community ART Groups (HCW-led)
	Family Model
	Community-Based Teen Clubs (HCW-led)

- CQUIN nomenclature includes the conventional model as a type of more-intensive model.
- Less-intensive models sub-divided into categories:
 - **Facility-Based Individual (FBI);**
 - **Facility-Based Group (FBG);**
 - **Community-Based Individual (CBI);**
 - **Community-Based Group (CBG);**
- All models can be further defined by quantity of ART provided (e.g., 3- or 6-month drug distribution) as applicable.

Introduction: DSD Program Maturity

The **CQUIN Dashboard** is another way to systematically describe a country's differentiated treatment program:

- Uses a capability maturity model;
- Includes 13 domains representing necessary components for implementing differentiated ART (DART) services at scale;
- Uses 5 stages of maturity represented by a color scale;
- Multi-stakeholder country teams stage the country program – an internal, consultative activity, not an external evaluation.

Impact					Red	Orange

Burundi : Model Mix

Burundi : Quantity of ART Distributed - MMD

Burundi : Selected Achievements

- Increased DSD coverage for less intense models from 17% to 33%.
- Establishment of national coordination and technical committee for DSD.
- Drafted addendum to the national HIV guidelines in line with 2021 WHO recommendations.
- Drafted policies, guidelines and tools for inclusion in the DSD implementation plan.

Burundi : Selected Challenges

- Difficulties in accelerating reforms for the DSD strategy due to the lack of national DSD reference documents.
- Delay in the establishment of national DSD coordination and validation of DSD models and tools adapted for Burundi.
- Difficulties in bringing together different partners to agree on the best strategy to adopt to scale up DSDs at the national level.
- Difficulties in adopting the name and definition of the Community ART Groups (GAC) model which was falsely called PODI in all reference documents including DSD data collection and reporting tools.
- Lack of a national assessment of provider and beneficiary satisfaction with DSD services.

Burundi : Selected Goals and Targets for 2022

- To increase the proportion of ART patients enrolled in less intensive models from 33% to 65%.
- To increase the coverage of health facilities offering DSD from 19% to 35%.
- To increase the proportion of 6MMD model patients from 0.2% to 20%.
- Start DSD for patients with advanced HIV disease, TB / HIV coinfection, maternal and child health, etc. in some pilot sites
- Organize a Client satisfaction assessment.
- Organize a DSD performance review towards the end of the year.

Zimbabwe : Model Mix

Zimbabwe: Quantity of ART distributed - MMD

Zimbabwe : Selected Achievements

- National M and E System adapted for DSD.
- Sustained implementation of outreach services for HIV/ART in urban areas.
- Increase in 6-MMD implementation.
- Strengthening of the dissemination and use of the Kuthabila Call Centre for RoC.

Zimbabwe : Selected Challenges

- Scale up of 6 MMD led to the reduction of the number of RoCs in the other less intense DSD models.
- Several downtime issues affecting Kuthabila call center platform.

Zimbabwe : Selected Goals and Targets for 2022

- 55% of people on ART will be in less-intensive DSD treatment models.
- Conducting a nationally representative DSD Quality and Impact Assessment / DSD Program Review.
- Strengthen male involvement in HIV care through the pilot of the young mentor dad project and adopt lessons learnt for scale up.
- Scale up young mentor mothers' initiative and Mbereko groups for DSD for MNCH.
- Continued integration of TB/HIV services into less-intensive models.

In Summary...

- Zimbabwe more matured country with scale implementation, guidelines, and M&E system in place now prioritizing population diversity and improving quality.
- Burundi is a newer less mature country working towards standardizing normative guidelines and scaling up coverage.

Shared 2022 Goals:

- Increase coverage of people in less-intensive differentiated treatment models
- Increased priority for DSD for advanced HIV disease, TB / HIV coinfection, maternal and child health
