

# DSD: Where are we now?

**Nathan Paul Ford, PhD, MPH, FRCPE**

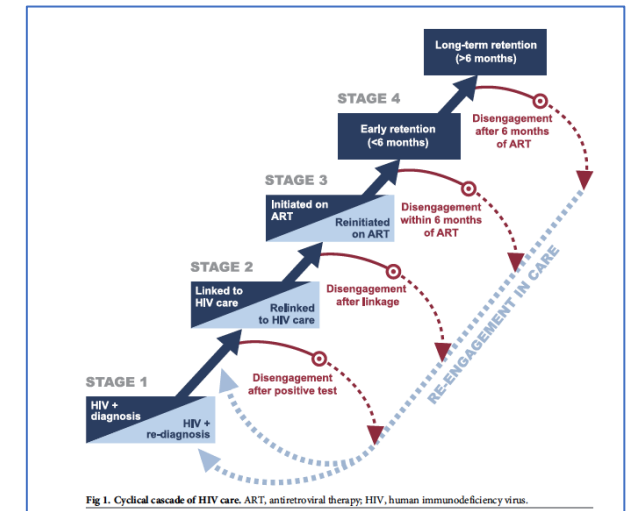

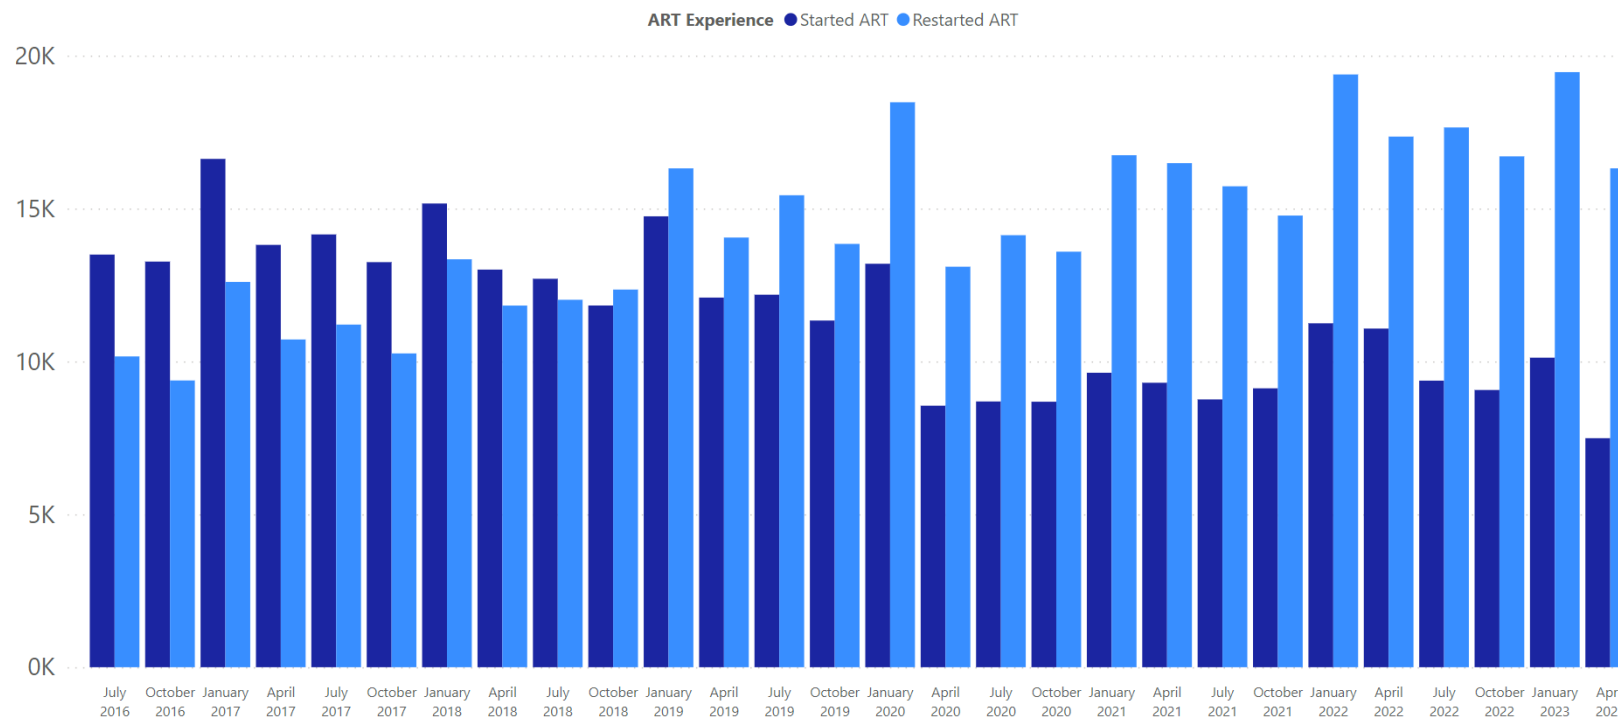

Scientific Officer, Department of HIV/AIDS and Global Hepatitis Programme, WHO

**CQUIN 7<sup>th</sup> Annual Meeting**

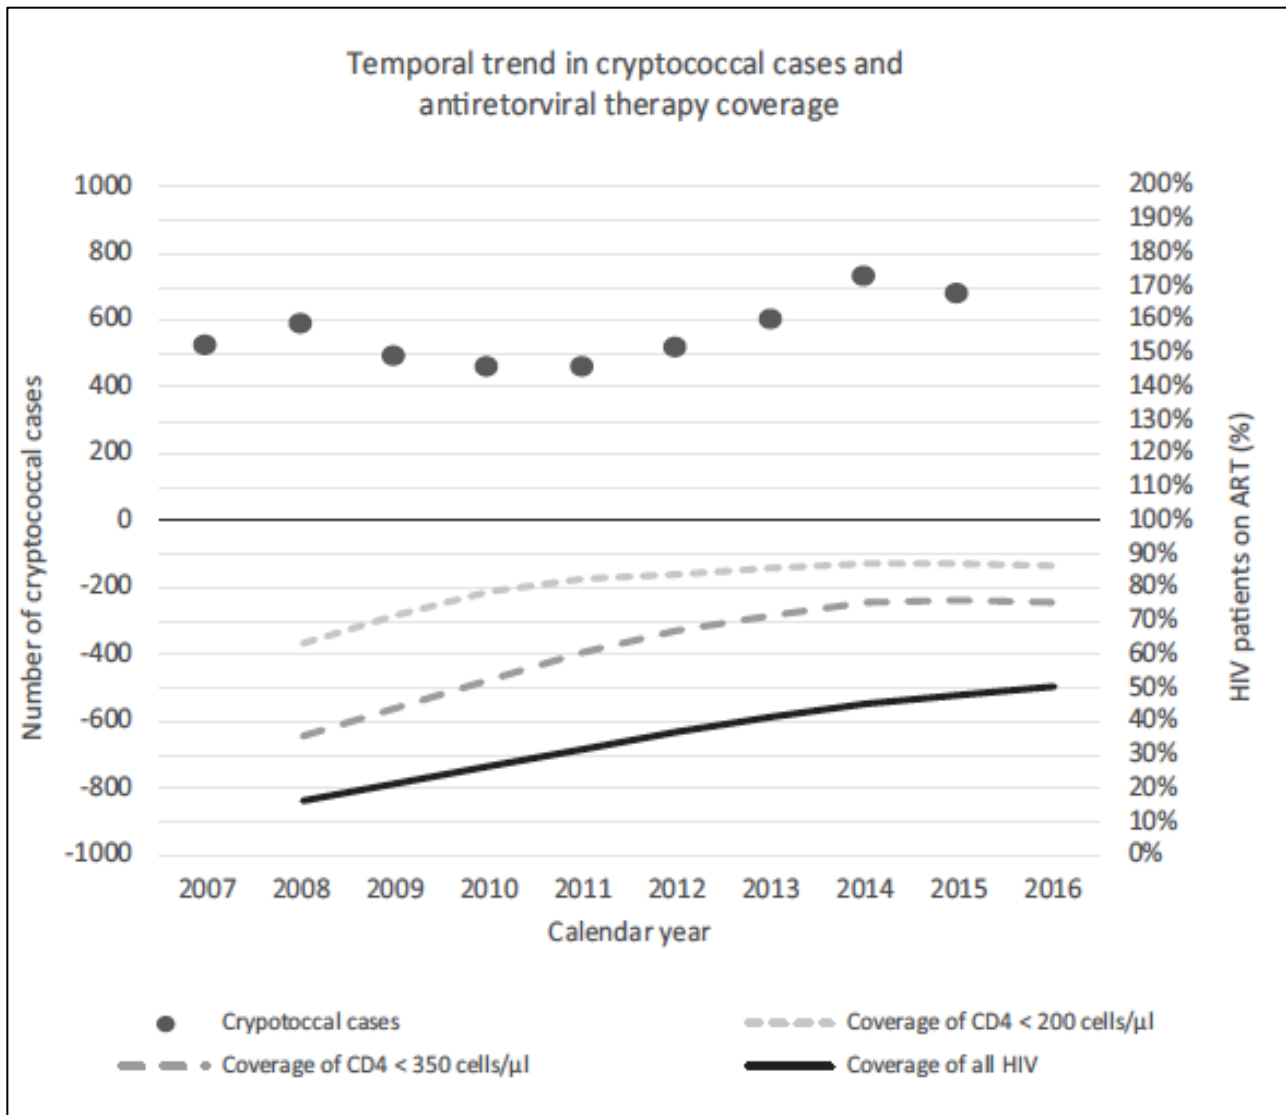

November 13 – 17, 2023 | Johannesburg, South Africa

# The cyclical cascade

Western Cape: 2/3 of people starting ART have been on ART

## WHY DO PEOPLE HOSPITALISED WITH HIV HAVE POOR OUTCOMES?

Seriously ill people living with HIV often suffer from a variety of life-threatening infections

**20%** of people die in hospital

Tuberculosis, cryptococcal meningitis and severe bacterial infections are the most common causes

Sometimes people are not linked to care following discharge from hospital

**19%** of people successfully discharged from hospital are re-admitted within a year

Patients often suffer with long-term disabilities following discharge and still need care

**14%** die within a year of discharge

Differentiated AHD  
High risk and seriously ill

# Primary health care and HIV: convergent actions

Policy considerations for decision-makers
