- Viral load testing in national policy
 - 79/81 (98%)
 - 17/21 (81%)
- Lay-provider performing HIV Testing
 - 75/166 (45%)
 - 19/21 (90%)
- TB Preventive Treatment (TPT)
 - 98/115 (85%)
 - 14/21 (67%)
- CrAg
 - 53/115 (46%)
 - 15/21 (71%)
- LF-LAM as TB diagnosis
 - 29/115 (25%)
 - 17/21 (81%)

Data source GAM 2023

Unpacking Self-testing implementation

- **National wide**
 - 42/105 (40%)
 - 13/21 (62%)
- **Only at sub-national level/selected district**
 - 21/105 (20%)
 - 5/21 (24%)
- **Only as Pilot**
 - 27/105 (19%)
 - 2/21 (9.5%)
- **Not implemented anywhere in country**
 - 15/105 (14%)
 - 1/21 (4.8%)

Data source GAM 2023

Unpacking Viral Load testing implementation

VL monitoring in % of facilities in reporting countries with VL in national policy

- Over 95%
 - 61/79 (77%)
 - 13/17 (76%)
- >50-95%
 - 11/79 (23%)
 - 4/17 (24%)
- <50%
 - 3/79 (3.8%)
 - 0
- Data not available
 - 4/79 (5%)
 - 0

Data source GAM 2023

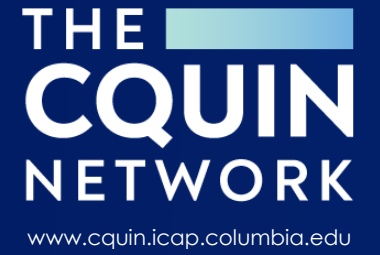

Things can be obstacles...

- Legal environment and social norms
- Age of consent
- Trained lay provider not allowed to perform HIV testing
- Lack of space for Community-led Response
- Missing quality assurance
- Forgotten sustainability
- Dysfunctional procurement and supply chain management
- Challenges in promoting integrated services
- Measurements and data quality

What more can be done?

Thank you!
