

# Rwanda Country Updates

**Presenter: Gisele Mujawamariya**

**Designation: HIV Care & Treatment Ag. Director**

**Rwanda Biomedical Center**

# Outline

- **Where are we now?**

- Progress towards 95:95:95 targets
- Treatment capability maturity model self-staging results
- DART model mix and MMD
- AHD CMM self-staging results
- dHTS CMM self-staging results

- **How did we get here?**

- Stakeholder coordination and prioritization processes
- Engagement with CQUIN
- Update on Country Action Plans
- Update on Integrating Non-HIV and HIV Services
- Program sustainability efforts and opportunities
- Successes and Challenges
- **2025 Priorities**

# Outline

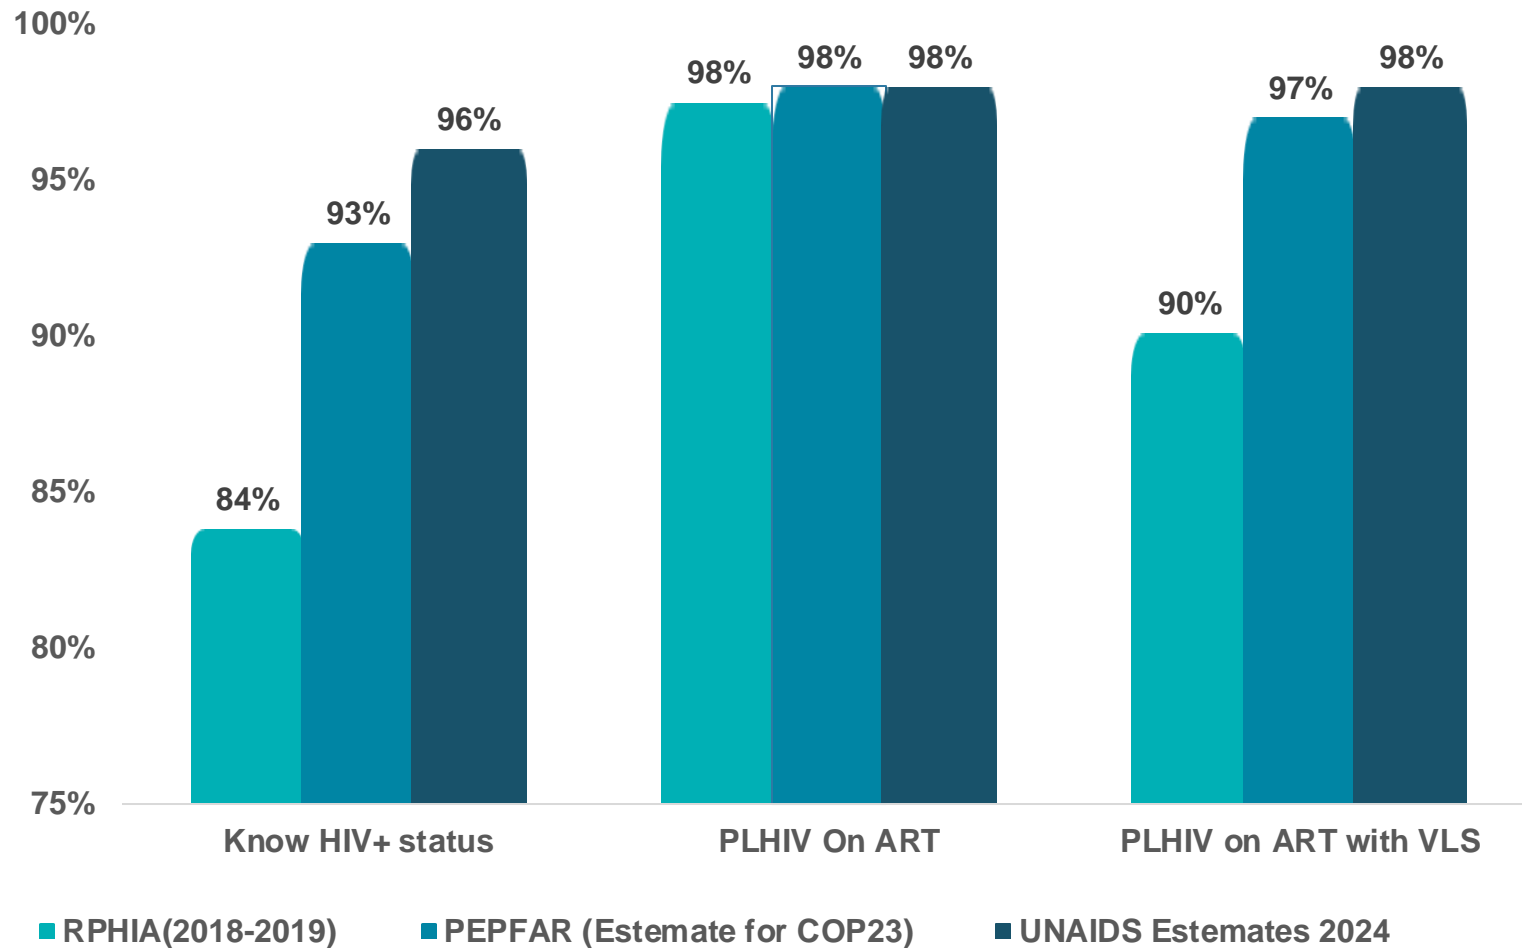

- **Where are we now?**

- Progress towards 95:95:95 targets
- Treatment capability maturity model self-staging results
- DART model mix and MMD
- AHD CMM self-staging results
- dHTS CMM self-staging results

- **How did we get here?**

- Stakeholder coordination and prioritization processes
- Engagement with CQUIN
- Update on Country Action Plans
- Update on Integrating Non-HIV and HIV Services
- Program sustainability efforts and opportunities
- Successes and Challenges
- **2025 Priorities**

# Progress Towards the 95:95:95 Targets - 1

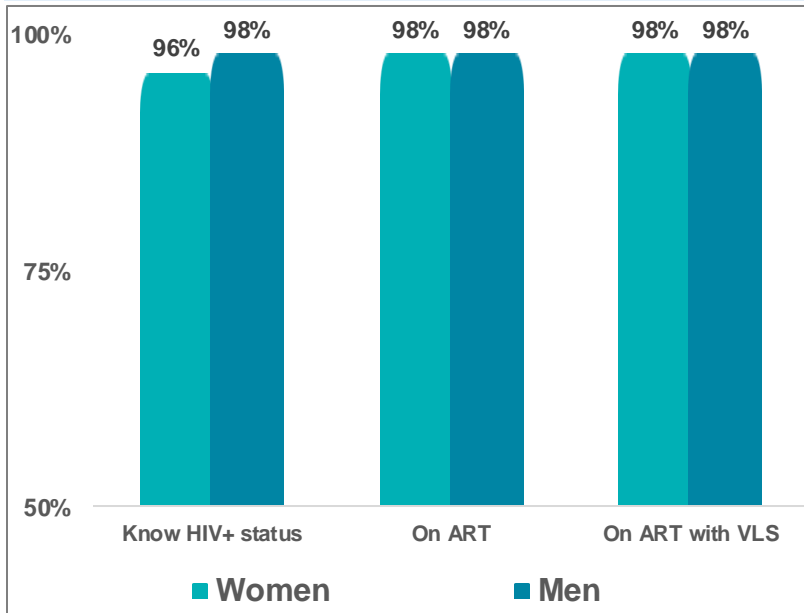

## HIV Prevalence

- Adults (15-64): 3%
- Old age (55-59): F - 7.4%  
M - 6.5%
- KP: FSW - 35.2%  
MSM - 5.8%
- 222,604 clients enrolled on ART with (F:63%, M:37%)
- Viral Load coverage:
  - ✓ Eligible between July 2023-June 2024: 215,518
  - ✓ VL done: 189,176 (88%)
  - ✓ VLS (<1000 cp/ml): 97% (source: VLSMS & LIS)

# Progress Towards the 95:95:95 Targets - 2

Adult Women vs Men ages 15+  
(Source: UNAIDS estimates 2024)

Children aged 0–14 (Source: UNAIDS estimates 2024)

FSW vs MSM (Source: FSW IBBS 2023 & MSM IBBS 2024)

- VL suppression rates exceed 95% in all the sub-populations
- The first 95 target (knowledge of HIV status) exhibits a substantial gap among KP (FSW and MSM) as well as among children aged 0-14

# Rwanda Treatment CMM Results: 2024

Policies				
Guidelines				
Coordination				
Community				
Procurement				
Facility Coverage	Diversity	Scale Up Plan	MCH	
Client Coverage	Training	M&E System	Family Planning	NCD/HIV
Key Populations	TB/HIV	AHD	Quality	Impact
Most mature			Least mature	

- Eight domains attained the most mature [dark green] staging, with significant progress noted in sustaining DART policies and responding to the supply chain needs for RoC
- The least mature domains (2 in red and 3 in orange) had observable gaps in the integration package of services i.e. MCH/HIV, FP/HIV and NCD/HIV as well as quality of DART services and impact domains

# Rwanda Treatment CMM Results: Change over Time - 1

Domains	2022	2023	2024
Policies	Light Green	Light Green	Dark Green
Guide lines	Light Green	Light Green	Dark Green
Diversity	Light Green	Light Green	Light Green
Scale Up Plan	Yellow	Yellow	Yellow

TB/HIV	Light Green	Yellow	Light Green
MCH	Red	Orange	Orange
NCD/HIV	Light Green	Red	Red
Family Planning	Yellow	Orange	Orange
Quality	Yellow	Yellow	Orange
Impact	Red	Red	Red

## TB/HIV (Yellow to Light Green):

- TPT is now integrated into less-intensive DART models, achieving >95% TPT coverage among people on ART.

## Coordination (Light Green to Dark Green):

- DART coordination is led by a dedicated sub-TWG, and a DSD Focal person within the MoH.

## Key Population (Orange to Dark green):

- Over 75% of the coverage targets were achieved for each group – KP surveys

# Rwanda Treatment CMM Results: Change over Time - 2

Domains	2022	2023	2024
Policies	Green	Green	Dark Green
Guide lines	Green	Green	Dark Green
Diversity	Light Green	Light Green	Light Green
Scale Up Plan	Yellow	Yellow	Yellow
Coordination	Light Green	Light Green	Dark Green

TB/HIV	Green	Yellow	Light Green
MCH	Red	Orange	Orange
NCD/HIV	Grey	Red	Red
Family Planning	Yellow	Orange	Orange
Quality	Yellow	Yellow	Orange
Impact	Red	Red	Red

## M&E (Remains Yellow):

- The M&E system is unable to disaggregate RoC retention and VL suppression rates by DSD model mix or MMD and cannot yet calculate the mean or median clinic visits per client.

## NCD/HIV (Remains Red):

- NCD/HIV integration is at the infancy stage, hence the least mature staging.

## Impact (Remains Red):

- First DPR yet to be implemented.

# Rwanda Differentiated Treatment Model Mix - 1

The 2022 HIV Guidelines outline four DSD models for RoCs. Less intensive DSDM were widely implemented in 2023-24 with an 87% coverage in June 2024, compared to 75% in June 2022

# Rwanda Differentiated Treatment Model Mix - 2

- **Conventional model:** Covering 13% of the RoC that need additional support [unstable]
- **FBI:** Covers 61% well-established
- **FBG:** For adolescent support (9%) and groups with shared characteristics – Key Populations (KP), pregnant and breastfeeding women, people with comorbidities (17%)
- **CBI:** New home delivery model for the disabled, elderly, unattended children and key populations

# Rwanda Differentiated Treatment: Multi-month Dispensing

- 6+MMD has progressively increased from 43% in June 2022 to 61% as at the end of June 2024
- Key factors leading to increased 6+MMD coverage:
  - Strong and uninterrupted supply chain – TLD
  - Capacity building – extensive training programs and targeted mentorships in low-performing HF

# Rwanda AHD CMM Results 2024

- **Most mature:** 10 domains (Policies, SOPs, Facility Coverage, etc.)
- **Advanced:** 1 domain (Coordination)
- **Developing:** 1 domain (M&E System)
- **Emerging:** 1 domain (Quality)
- **Least mature:** 5 domains (Client Coverage 1 to 4 and impact)

# Rwanda AHD CMM Results – Trend over Time (2023-2024)

Domains	2022	2023	2024
Policies		Dark Green	Dark Green
Guidelines		Dark Green	Dark Green
AHD Scale-up Plan		Dark Green	Dark Green
SOPs		Dark Green	Dark Green
Coordination		Yellow	Light Green
ROC Engagement		Dark Green	Dark Green
Training		Light Green	Dark Green
Supply Chain		Yellow	Dark Green
M&E System		Yellow	Yellow
Diagnostic Capability 1		Dark Green	Dark Green
Diagnostic Capability 2		Red	Dark Green
Facility Coverage		Dark Green	Dark Green
Client Coverage 1		Red	Red
Client Coverage 2		Red	Red
Client Coverage 3		Yellow	Red
Client Coverage 4		Red	Red
Quality		Red	Orange
Impact		Red	Red

Improvements seen on the dashboard are primarily due to the action plans set over the last year to advance program domains that were least mature

## Diagnostic Capability 2 (Red to Dark Green):

- The inclusion of TB-LAM testing has expanded access, enabling the availability of the complete “minimum package” of diagnostic tests at over 75% of health facilities, either on-site or via referral.

## Supply Chain (Yellow to Dark Green):

- Significant strengthening of the supply chain and procurement processes has reduced stockouts over the past year, improving overall commodity security.

## Client Coverage Domains (Remains Red):

- Persistent challenge due to the lack of disaggregated data, preventing accurate estimation of client coverage for AHD management.

# dHTS CMM Results – 2023 vs 2024

Domains	2023	2024
Policy: Strategic Model Mix	Green	Green
Policy: Optimizing HIV Testing	Dark Green	Yellow
Policy: Linkage	Dark Green	Light Green
Finance/Resource Allocation	Dark Green	Dark Green
SOPs	Light Green	Dark Green
Scale-up Plan	Light Green	Dark Green
Community Engagement	Light Green	Dark Green
Private Sector Engagement	Red	Red
Coordination	Dark Green	Dark Green
dHTS Training	Yellow	Dark Green
M&E	Orange	Dark Green
Procurement/Supply Chain	Dark Green	Dark Green
Population Coverage	Dark Green	Light Green
Linkage to Tx: Timely Linkage	Light Green	Light Green
Linkage to Tx: Verification	Dark Green	Dark Green
Linkage to Prevention	Orange	Yellow
EQA/IQC	Light Green	Yellow
Proficiency Testing	Light Green	Yellow
Clinical Services	Orange	Dark Green
Impact: Knowledge of Status	Red	Orange
Impact: Linkage to Tx	Red	Orange
Impact: Linkage to Prevention	Red	Red

- dHTS improvements have been documented with improved targeted testing attributed to:
  - Scaled-up partner notification services
  - Increased PrEP uptake and coverage of 4th proficiency testing
  - Improved M&E of prevention services among high-risk populations and increased training through tele-mentorship
- Regressed domains include:
  - EQA/QC – Due to a high failure QC rate (<75%) in comparison to the previous year
  - Optimizing HTS – Due to delayed implementation of 3 serial validated rapid diagnostic tests for HIV+ confirmatory diagnosis
- Other existing gaps include non-specific standard timelines for linkage to HIV prevention services

# Overview of HIV Program 2024 CMM Results

## Enabling Domains Analysis:

- Across the dHTS, DART and AHD CMMs, maturation is well demonstrated with the enabling domains (dark/light green)
- Coordination mechanisms are well established (dark green) in dHTS and DART
- Private sector engagement had low maturation (red in dHTS)

## Overview of HIV Program 2024 CMM Results - 2

### Priority Areas for Strengthening:

- Private Sector Engagement (red staging in dHTS)
- Client Coverage (red staging in AHD)
- Impact domains (orange/red staging across all three CMMs)
- M&E Systems (yellow in DART and AHD)
- Integration with other health programs (MCH, NCD/HIV and FP)

# Overview of HIV Program 2024 CMM Results - 3

## Plans for Integrated Outcome Improvement:

- Have a unified M&E framework that captures key DSD indicators e.g. linkage to services and client coverage
- Foster effective engagement and oversight of private sector dHTS
- Conduct a DPR to help improve staging with the impact domain

# Outline

- **Where are we now?**

- Progress towards 95:95:95 targets
- Treatment capability maturity model self-staging results
- DART model mix and MMD
- AHD CMM self-staging results
- dHTS CMM self-staging results

- **How did we get here?**

- Stakeholder coordination and prioritization processes
- Engagement with CQUIN
- Update on Country Action Plans
- Update on Integrating Non-HIV and HIV Services
- Program sustainability efforts and opportunities
- Successes and Challenges
- **2025 Priorities**

# Stakeholder Coordination and Prioritization Processes

## Coordination of DSD Activities by C&T TWG

- The C&T TWG is responsible for planning and coordinating DSD activities.
- Three sub-TWGs on DSD have been conducted by the care and treatment TWG to enhance focus and implementation.

## ROC participants include:

- RRP+ (Rwanda Network of People Living with HIV), RNGOF (Rwanda NGOs Forum on HIV/AIDS), and Faith-Based Organizations

# Stakeholder Coordination and Prioritization Processes -2

## CQUIN Planned Activities (2024-2025) by Funding Support:

- **PEPFAR-Supported Activities:** Performance review meetings; Rapid assessment among PLHIV presenting with AHD; NCD integration model development and piloting; and support e-learning and tele-mentorship scale-up.
- **GF-supported Activities:** TWG meetings; scale-up of adolescent-friendly services; clinical mentorship programs; experience-sharing sessions; integrated service delivery and quality management

# Engagement with CQUIN

- **Participated in 3 COPs:**
  - MCH CoP meeting
  - AHD CoP meeting
  - HIV/NCD Integration CoP meeting
- **Impacts on Country Program:**
  - Earned best practices in strengthening FP integration of HIV services.
  - Improved policy and practical frameworks for addressing advanced HIV disease (Supply chain, M&E)
  - Enabling in development of comprehensive models for managing the dual burden of HIV and NCDs

# Update on Country Action Plans from 2023/2024 Meetings

## Activities that have been completed include:

- TWG meetings to review progress, address challenges, and coordinate AHD activities across health facilities
- Targeted training on PMTCT and AGYW minimum package of services to improve differentiated service delivery focusing on sites with new and untrained staff including youth peer educators in youth-friendly centers
- Establishing a core team to advance AHD interventions, share progress updates, and provide guidance in DSD meetings
- Procured TB-LAM commodities, and trained HCPs from 46 hospitals to increase access to 2-3 “minimum package” diagnostic tests at >75% of all health facilities (on-site or by referral)
- Developed the integration NCD/HIV model and related SOP and tools focusing on hypertension, diabetes and cervical cancer
- Integrated training of trainers on new changes in guidelines including AHD management and CQI

# Update on Country Action Plans from 2023/2024 Meetings - 2

## Activities that are still ongoing include:

- Rapid assessment of shared characteristics among PLHIV presenting with AHD to support re-engagement in care and address gaps in screening, pre-emptive therapy, and management of major opportunistic infections
- Integration of a new CBS 2.0 paper-based tool that captures integrated services in the digital platform to draw analysis and dashboard visualization
- Revision of existing SQA tools and developing a harmonized DSD SQA tool for dHTS, DART and AHD
- Conduct an evaluation on DSD implementation. Protocol is underway

# Update on Integrating Non-HIV and HIV Services - 1

- **Defining integration:**

- Service delivery model that fosters a person-centered and holistic approach to patient care
- Provision of multiple services in a one-stop-shop center (HIV clinic) to streamline care and improve patient convenience

- **Establishing a coordinating mechanism**

- C&T TWG: A sub-TWG coordinates and plans integration activities to ensure cohesive service delivery
- DSD Focal Point: Actively participates as a member of the TWG; thus contributing to integration efforts
- University Teaching Hospital of Kigali (CHUK), RBC and Stakeholders: Collaborated to develop the NCD/HIV integration model which is set to be piloted in year 2025

# Update on Integrating Non-HIV and HIV Services - 2

## Community Engagement:

- Various community representatives are active members of the TWG.
- Community members actively contributed to developing the integration model.
- CLM tools were designed to capture data on non-HIV services (e.g., TB, HTN, FP) supporting a comprehensive view of integrated service delivery.

# Program Sustainability Efforts and Opportunities – 1

## Sustainability of DSD activities

- DSD activities initiated by CQUIN that have been adopted by in-country funding mechanisms
  - COP24-25: Development of National Quality standards and biannual facility assessments
  - DSD position transitioned from CQUIN to the National HIV program under the C&T unit
- Adaptations/modifications made to enable sustainability
  - Country contextualization of DSD models and quality standards. Rwanda has achieved most coverage goals; the primary focus is to ensure high-quality service delivery

# Program Sustainability Efforts and Opportunities - 2

- **Other plans to ensure country DSD programs are sustained**
  - Leveraged the well-established CBS platforms to monitor DSD models; CBS files have been revised to factor in DSD
- **National sustainability roadmap**
  - Extent to which DSD is factored into the ongoing national sustainability planning in the country
    - The UNAIDS sustainability roadmap exercise is currently ongoing, and DSD is factored in, particularly for programs for key and priority populations
  - Extent to which integrated service delivery is factored into the country's ongoing sustainability planning
    - Integrated services for HTN, DM and mental health/HIV are among the key priority services with allocated funds under CoAG

# DSD Implementation Successes in 2024

## **Expanded DSD Models**

- Implemented revised DSD models with expanded eligibility criteria, increasing the number of Recipients of Care receiving care in less intensive models to 87%

## **NCD/HIV Comprehensive Model Development**

- Developed a comprehensive NCD/HIV model along with related SOPs, M&E tools and training materials—set to be piloted soon

## **Enhanced Screening for TB**

- Integrated TB-LAM testing in routine screening for PLHIV with AHD

# Challenges in DSD Implementation in 2024

- **Funding constraints:** Reduced funding limits the implementation of certain activities
- **Staffing shortages:** Insufficient staffing restricts efforts to fully integrate additional services within HIV clinics, impacting the one-stop model approach
- **Inconsistent program strategies:** Mismatched program strategies hinder seamless integration across services
- **Gaps with the M&E system:**
  - Limited interoperability affects real-time reporting and increases duplication.
  - Some DSD indicators are missing from current M&E tools and systems, impacting comprehensive monitoring.

# Outline

- **Where are we now?**

- Progress towards 95:95:95 targets
- Treatment capability maturity model self-staging results
- DART model mix and MMD
- AHD CMM self-staging results
- dHTS CMM self-staging results

- **How did we get here?**

- Stakeholder coordination and prioritization processes
- Engagement with CQUIN
- Update on Country Action Plans
- Update on Integrating Non-HIV and HIV Services
- Program sustainability efforts and opportunities
- Successes and Challenges

- **2025 Priorities**

# DSD Priorities for 2025

## DSD-related goals and/or projections in your country's plans for 2025:

- NCD/HIV model implementation and plan for scale-up
- Expanding community-based DSD models to facilitate easier access to care for aged and disabled people and well-established community KP groups
- Scale-up of adolescent models to support ART coverage, retention in care, and VLS among CALHIV.
- Foster capacity building through e-learning and tele-mentorship to ensure sustainability
- Enhancing M&E system – facilitate reporting and data availability.
- Conduct a DSD impact assessment [DPR]

# DSD Priorities for 2025 –2

## To learn from other countries in the CQUIN network in the coming year:

- Exploring successfully NCD/HIV integration implemented in other countries
- Developing and using strong M&E frameworks to track the impact of DSD strategies on health outcomes
