# Background information on the QMS tool kit adapted to non-laboratory settings development

**A significant proportion of HIV testing is performed outside laboratories  
There is a need to ensure quality in those settings**

# Adaptation of existing tools to non-laboratory testing sites in resource-constrained settings

**The QMS tool kit does NOT replace existing tools but provides a set of crucial activities to implement in case not all can be done**

# LIVE DEMONSTRATION

[Quality Management System for non-laboratory settings.](#)

# Thank You
